05. MARKET RESEARCH

06. INVESTOR BENEFIT

THE GLOBAL WATER PARTNERSHIP'S VISION IS FOR A WATER SECURE WORLD. OUR MISSION IS TO ADVANCE GOVERNANCE AND MANAGEMENT OF WATER RESOURCES FOR SUSTAINABLE AND EQUITABLE DEVELOPMENT.

# ABOUT ORGANIZATION

GWP is an international network that was created in 1996 to foster the implementation of integrated water resources management: the coordinated development and management of water, land, and related resources to maximize economic and social welfare without compromising the sustainability of ecosystems and the environment.

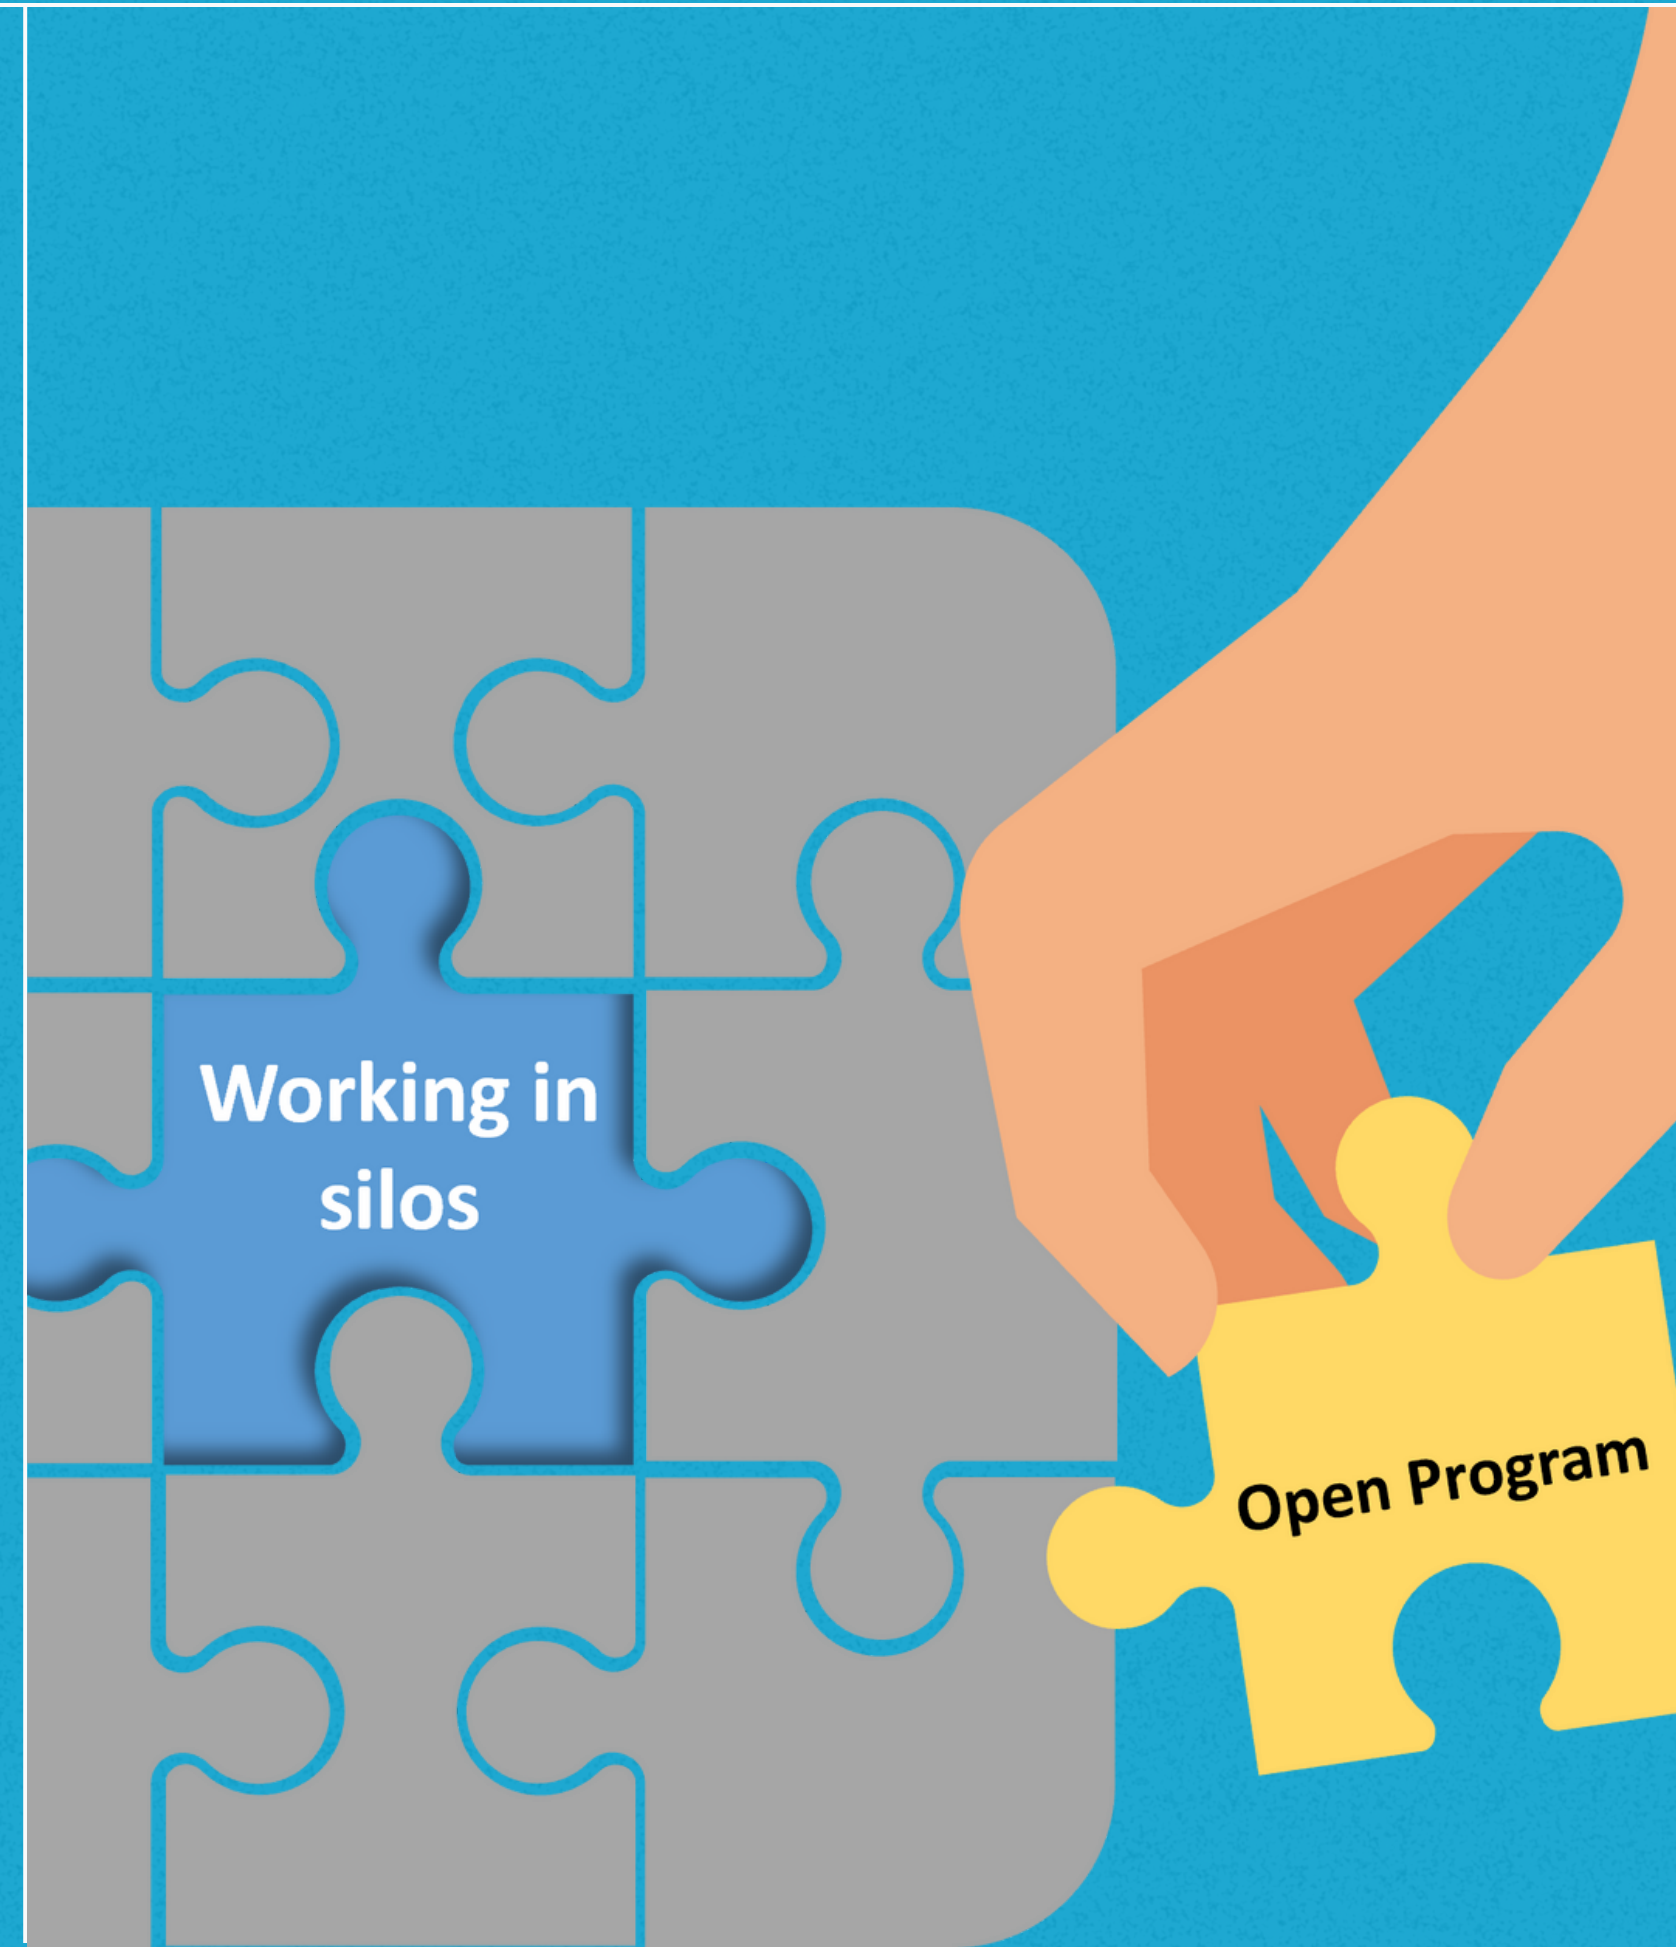

The GWP Network is open to all organizations which recognize the principles of integrated water resources management endorsed by the Network. It includes states, government institutions (national, regional, and local), intergovernmental organizations, international and national non-governmental organizations, academic and research institutions, private sector companies, and service providers in the public sector. The Network has 13 Regional Water Partnerships (include Southeast Asia region), 85 Country Water Partnerships, and more than 3,000 Partners located in 182 countries.

## PROBLEM STATEMENT

- Long overdue problem of working in silos
- Absence of a engagement and coordination mechanism to enable sharing of information on actions and activity, actions alignment and thus investments, in the water security space of all water actors
- Future planning to implement actions at local, provincial, national, or regional levels is disparate, lacks synergy and results in duplication
- Providing stakeholders with a framework for integrating and coordinating the various aspects of water management in a sustainable, equitable, and holistic manner, is key to sustainable development across the globe and also within the Pan Asia region, with governments and stakeholders taking significant efforts to strive to achieve global water security goals

## BACKGROUND

# PROPOSED SOLUTION

The Integrated Water Security Open Program (IWSOP) will assist in prioritizing and targeting actions to mobilize water investments across the region. It will enable this through the tracking of the progress of actions to identify bottlenecks to guide action and to narrow the water investment gap where they exist. It will also mobilize political leadership and commitment to accelerating action and financing of water investments and promote accountability. The IWSOP will strengthen partnerships, foster collaboration and knowledge sharing, changes in practices and the realignment of actions towards a more strategic approach for improved water governance through its two components

COMPONENT - 1  
WATER SECURITY OPEN PLATFORM  
(WSOP)

COMPONENT - 2  
WATER SECURITY SUPPORT  
FACILITY (WSSF)

Integrated Water Security Open Program

Water Security Open Platform | Water Security Support Facility

Impact (5 - 10 years)

A higher level of water security achieved by each country, in transboundary basins, and the Pan Asia region

Outcomes (5 years)

Water Security Open Platform

A country-wide and regional prospectus of water resource management actions is established at all levels enabling policy makers, financing institutions, multi-stakeholders and planners to make more informed decisions and take action; and the alignment of government and non-government stakeholders’ efforts on the ground enabling a clear understanding of current and future investment in water resource management actions to develop a strategic approach to these investments resulting in improved water governance in achieving water security goals and implementation of IWRM principles in the Pan Asia Region.

Water Security Support Facility

Countries are able to identify and improve their readiness capacity, develop and implement strategic national, and where relevant inter-regional and transboundary, water security program; and that regional and country delivery partners are accredited to provide support to countries resulting in an improved performance in achieving water security and implementation of IWRM principles in the Pan Asia Region.

Outputs (1- 5 years)

Multi-stakeholder action mapping; learning exchanges; multi-stakeholder contribution reports; and alignment mechanism resulting in consolidated planning and budgeting to achieve water security goals in the Pan Asia region.

Completion of a capacity readiness assessment report; facilitation of support requests through the water security support menu from countries, and engagement of regional and country delivery partners to be accredited to deliver the support, and successful efforts for resource mobilization resulting in improved performance in achieving water security goals in the Pan Asia region.

Output indicators:

- Number of countries that set up a national Water Security Open Platform
- Number of organisations that have subscribed to the platform and registered actions
- Number of learning exchanges held
- Number of information and communication materials and/or events organised to promote the Water Security Open Platform
- Number of annual multi-stakeholder contribution reports drafted
- Number of countries that develop guidelines for a water security alignment mechanism
- Number of resource mobilization events held

Output indicators

- Number of catchments that have been assessed for capacity readiness for achieving a water secure catchment
- Number of water resource managers (i.e., managers at the catchment level) that have accessed and submitted support requests to the water security support menu
- Number of regional and country delivery partners accredited
- Number of resource mobilization events held

PROJECT PROPOSAL

RESULT FRAMEWORK

WWW.GWP-SEA.ORG/OPENPROGRAM

# COMPONENT 1: ACTION MAPPING & ALIGNMENT PLATFORM

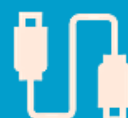

## Actions mapping & Alignment

Action registration based on themes and linked to indicators of water security

## Coordination & Alignment

Development of multistakeholders coordination & alignment mechanism

## Consolidated Water Security Program (plan & budget)

Development of multistakeholder water security program

## Learning exchange

Tailored learning exchange between actions

## Multistakeholder Contribution Report

Annual multistakeholder contribution report on water security achievements

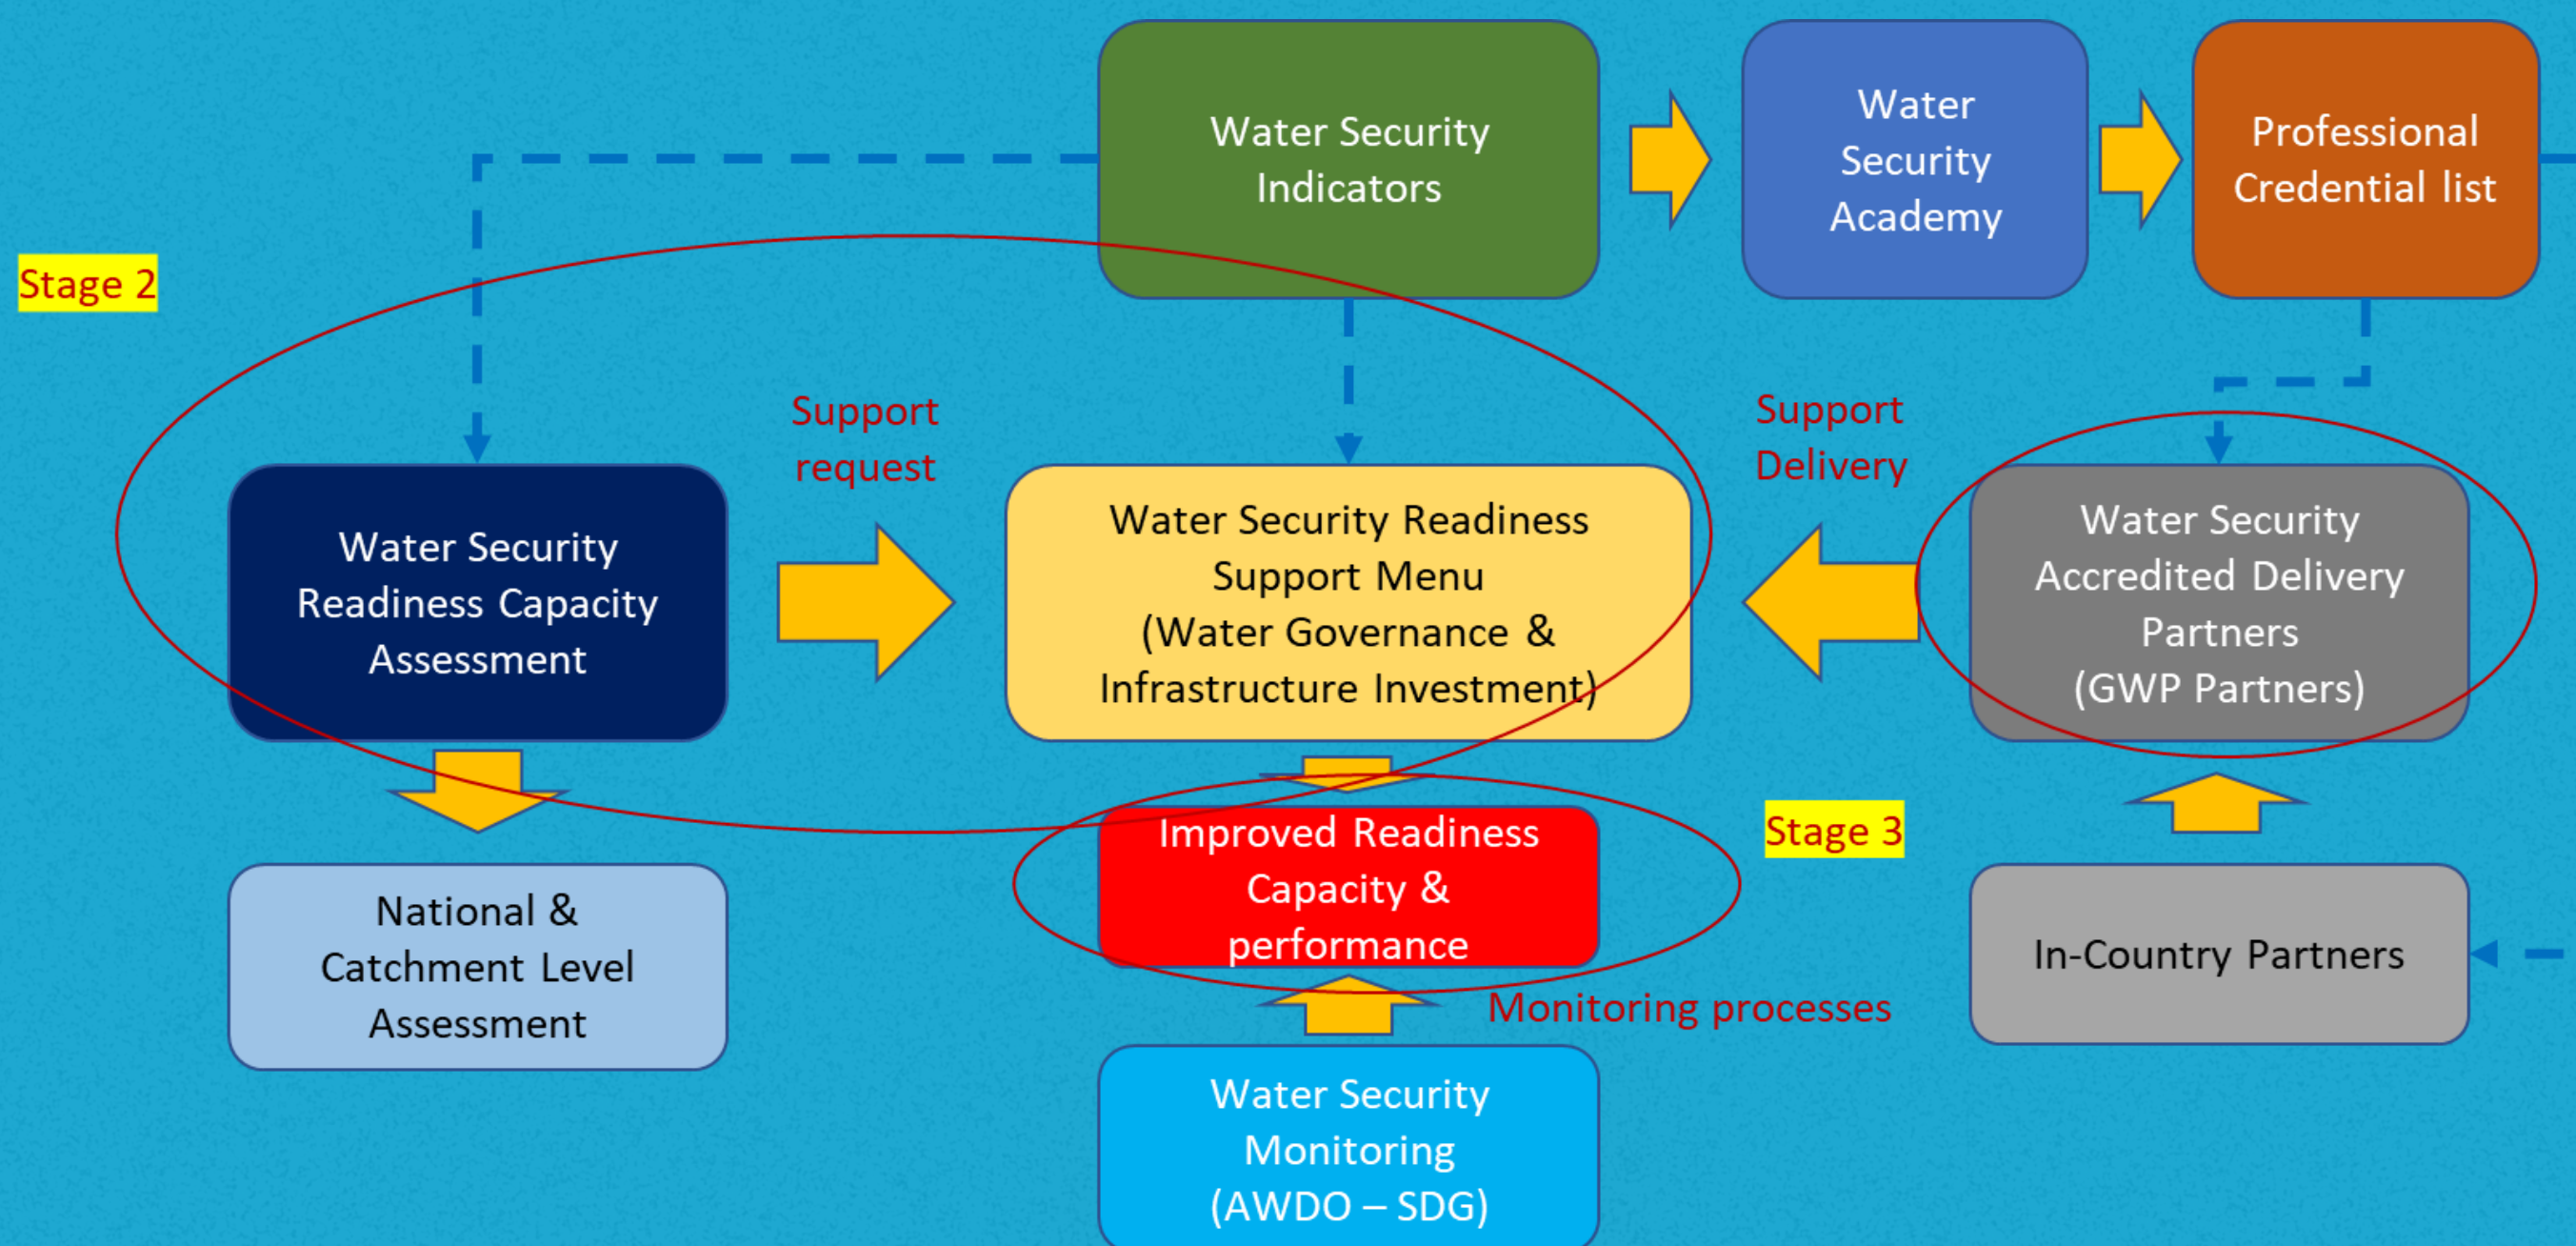

First component focuses on action mapping related to water security. Each registered action will be linked to relevant water security category (which are derived from the global indicator related to water security, such as AWDO and SDG).

This will enable to facilitate learning exchange between actions and further facilitate the development of Multistakeholders coordination and alignment mechanism.

Open program will also provide assistance to develop annual multistakeholder contribution report on water security achievement and ultimately to facilitate the consolidation of water security program in the country.

## COMPONENT 2: WATER SECURITY SUPPORT FACILITY

Second component of open program aims to provide support for all key stakeholders who wants to improve its readiness to be effective and efficient in playing their role and implementing their actions to achieve water security goals (this is the demand side). The support facility will involve development partners who have the expertise to deliver support included in the support menu of the facility (this is the supply side).

# MILESTONE PROJECT

COMPONENT 1

2022

## MILESTONE -1

Water Security Open Platform is developed, operationalized, maintained, and continually improved with adequate security system

## MILESTONE - 2

Water Security Open Platform governance at all levels is fully established

## MILESTONE - 3

Water Security Open Platform is promoted and subscribed by all type of organizations working on water security related activities

## MILESTONE - 4

Water security open platform knowledge management procedures and results are in place, publicly available and actively communicated to key decision-makers

## MILESTONE - 5

Water security efforts alignment is facilitated and implemented

## MILESTONE - 6

Sustainable resources for the excellence service of open program [open platform] are secured

## MILESTONE - 7

Water Security Open Program Project management team at all levels are established and operational

# DONOR BENEFIT

**1.**

Prioritize better based on  
the mapping of actions

**3.**

Support successful actions

**2.**

Reduce redundancy  
(efficient budgeting)

**4.**

Support strategic ideas

# DEVELOPMENT PARTNERS BENEFIT

**1.**

Mapping all actions  
and see what is  
missing on the ground

**3.**

Recognition no matter  
how small a  
contribution is

**5.**

Possible support  
for resource  
mobilization

**2.**

Synergize, gradually,  
all actions (locations  
and approaches)

**4.**

"Being a part of  
something bigger"

**6.**

Facilitation of  
possible custom  
replication

# GOVERNMENT BENEFIT

**1.**

Coordination mechanism  
between government and  
multistakeholder

**3.**

Wider area of coverage

**2.**

Alignment of actions and  
resources (Joint program)

**4.**

Acceleration of development  
and better learning exchange  
among countries
