

IWRM and ecosystem based approaches: Complementary, duplicating or competing?

Water plays multiple roles in ecosystems and society. Yet, the dependency of human wellbeing on ecosystems has been given insufficient attention where narrow economic pursuits have been given priority over environmental concerns. Through integrated water resources management (IWRM), managers and stakeholders deal with the complex task of securing water for people, industry, food production, navigation, hydropower and the environment. Welcome to join our seminar at Stockholm World Water Week!

Tuesday 28 August 2018 | Room: NL 357

09.00-10.30 Session I: Setting the scene: Are IWRM and ecosystem based approach complimentary, duplicating or competing?

11.00-12.30 Session II: Navigating the interlinkages of IWRM and ecosystem based management for climate change adaptation

14.00-15.30 Session III: Towards integrated water and ecosystem management

Convenors: Stockholm International Water Institute / Global Water Partnership / Global Environment Facility - International Waters: Learning Exchange and Resource Network / Action Platform for Source to Sea Management / National and Kapodistrian University of Athens
