Nexus Mapping Study for South-East Europe: Report for Kosovo*

Background Study for the SEE2020 Region Nexus Policy Dialogue Process

* This designation is without prejudice to positions on status, and is in line with UNSCR 1244 and the ICJ Opinion on the Kosovo declaration of independence

December 2018
Background

The Study was prepared in the framework of the following projects:

i. “Water-Food-Energy-Environment Nexus Policy Dialogue Process in South East Europe” funded through the Advisory Assistance Programme of the German Environment Agency in cooperation with the German Federal Ministry for the Environment, Nature Conservation, Building and Nuclear Safety;

ii. GEF IW:LEARN Activity 2.3: Supporting Regional Cooperation on Shared Water Resources through Dialogue, and

iii. “Promoting the Sustainable Management of Natural Resources in Southeastern Europe, through the use of the Nexus approach” funded by the Austrian Development Agency.

The Study was drafted by “Fresh-thoughts Consulting GmbH” contracted by GWP-Med, with contributions by GWP-Med staff members. The findings, interpretations, and conclusions expressed in this work do not necessarily reflect the views of GWP-Med or the donor organisations.

Authors: Alban Doko, Linda Romanovska, Guido Schmidt & Thomas Dworak (Fresh-Thoughts Consulting GmbH)

1. Introduction

This Economy Report focuses on Kosovo* as a part of SEE2020 Region (including The Former Yugoslav Republic of Macedonia, Bosnia and Herzegovina, Albania, Montenegro and Serbia, within its wider geographic context). It is aimed as the conceptual and technical background to support and inform the Nexus Policy Dialogue process, ongoing since 2013 in SEE under the ‘Petersberg Phase II / Athens Declaration Process’ and Global Environment Facility’s (GEF) programme “International Waters: Learning Exchange and Resources Network” (IW:LEARN) in cooperation with the Regional Cooperation Council (RCC).

Table 1: Overview on key Nexus sectors in Kosovo*.

1.1. Purpose of the study – Context

This Nexus Assessment is prepared in the framework of the following projects:

- GEF IW:LEARN Activity 2.3: Supporting Regional Cooperation on Shared Water Resources through Dialogue
- “Promoting the Sustainable Management of Natural Resources in South-eastern Europe, through the use of the Nexus approach” funded by the Austrian Development Agency.
This Study will be used as the conceptual and technical background to support and inform the activities of the three Projects above as well as the Nexus Policy Dialogue process, who have the following objectives:

- Supporting the discussion for the preparation of a regional water, food, energy, environment Nexus Strategy/Roadmap under the SEE2020, describing steps and actions for the introduction of Nexus approach considerations in the basin/aquifer management frameworks at national and transboundary levels as means towards sustainable management of water, land, energy and environment.
- Facilitation of the discussions among the SEE2020 economies for the possibility of a Regional Integral Water Management Framework Agreement (RIWMFA) comprising among others of regional means and tools to assist in addressing challenges related to transboundary water resources management (TWRM).
- Fostering cross-fertilisation of institutions and practitioners at regional and national levels.

The specific objectives of the Study are the following:

- Identification of the level of integration of management of natural resources related to Nexus (i.e. water, energy, food and ecosystems).
- Identification of interlinkages and potential benefits, trade-offs and conflicts among Nexus sectors (water, energy, food and ecosystems).
- Brief assessment of the level and status of cooperation for the management of transboundary basins in the SEE2020 region.

### 1.2. Methodology for the development of the study

The work is divided in four main tasks, which have been developed in a sequenced way, overlapping in time, between August 2017 and September 2018. They are indicated in the following schema:
Based on the objectives established, data and information were gathered, which was carried out both at the regional level and at the level of the economies. The study includes in the Annex a list of literature, information sources, datasets and interviews.

For the Study, experts used several tools: desk research (relevant strategic documents, plans, programs; regional transboundary documents; statistical data for the economy; updated legislation; signed agreements regarding relevant nexus sectors; ratified conventions); contacting relevant institutions regarding missing data for some issues; and own knowledge and past experience.

2. Nexus Assessment for Kosovo*

Kosovo* has an area of 10 905 km². It is situated in South-Eastern Europe bordering Albania to the southwest, Montenegro to northwest, Serbia to northeast and The Former Yugoslavian Republic of Macedonia to the south.

The territory lies in geographic longitudes 41° 51’ and 43° 16’ and the latitudes 19° 59’ and 21° 47’.

Currently there are 38 municipalities with 1.469 settlements organized under the laws of the country.

Kosovo* state structure is characterized by a very young population, where the average age is 30.2 years. Population of Kosovo* is 1.8 million inhabitants.

In the period after 1990, Kosovo* struggled with the issue of migration which had an impact both in population structure and in its growing rate. Free and uncontrolled movement of population changed the ratio between urban and rural population. According to population census that was conducted in April 2011, 61% of the population lives in rural areas.
The territory of Kosovo* is characterized with various altitudes. The lowest point of Kosovo* is in the valley of river Drini i Bardhë, in the border with Albania which is only 270 m above the sea level, and the highest point is in the west of Kosovo*, Gjeravica with an altitude of 2,565 m.

In the hydrological aspect, Kosovo* is divided into river basins of Drini i Bardhë, Ibri, Morava e Binçës and Lepenci. The rivers of Kosovo* flow into three seas: Black Sea, Adriatic and Aegean Sea.
2.1. Key data and trends

2.1.1. Economy

The main features of the economy are the following:

- Real GDP: 5.1 Billion EUR, Employment rate (Kosovo* Institute of Statistics) is 28.0% (as 2016).
- Kosovo* is rich in natural resources, and has been an important mining centre for much of its history. In Kosovo* there is substantially high reserves of lead, zinc, silver, nickel, cobalt, copper, iron and bauxite.
The overall economic development of the Kosovo* shows a steady increase since 2003 in terms of nominal GDP and nominal GDP/inhabitant.

In terms of the main economic sectors, the primary sector is still very relevant in Kosovo*, whilst of decreasing relevance in terms of economic weight and employment. The secondary sector is stable also the tertiary sector.
The employment rate in Kosovo* is slowly increasing
The Gini index represents the (in)equality of wealth distribution.

In terms of the Imports and Exports between Kosovo* and SEE region there is a decrease in imports and an increase in exports.
2.1.2. Water Sector

Water resources represent an important factor in the country’s economic and social development. It is estimated that Kosovo* has a water availability of 1600 m³/water/year per capita. In hydrographic terms, Kosovo* is divided into 5 river basins: Drini i Bardhe, Ibri, Morava e Binches, Lepenc and Plava. In an average humidity year, approximately $3.8 \times 10^9$ or
121.2 m³/sec of water flow out of Kosovo*’s territory¹, while the water availability including surface water and underground water is about 4.6 \times 10^9 m³

The main hydrological feature in Kosovo* is the unequal and inadequate distribution of water demand when compared to the resources availability. The water energy potential in Kosovo* is very low and it has been used until now to a very modest extent. The main reserves of groundwater are located in the western part of Kosovo*, where reserves of surface water are also greater compared to the eastern and south-eastern parts where demand for water is very high.

Kosovo* has a few natural lakes, while its artificial lakes include: Batllava, Gazivoda, Radoniq, Perleplica and Badovc. It also has a few irrigation lakes. Kosovo* is rich in thermal water resources used for health and recreation.

Regional water companies in Kosovo* are: RWC Prishtina (Pristina), Hydroregion South (Prizren), Hydro-drini (Peja), Mitrovica (Mitrovica), Radoniq (Gjakove), Hydro-Morava (Gjilan), bifurcation (Ferizaj) and HPE Iber- Lepenc. About 69.6% of Kosovo*’s population is supplied with water through public systems managed by the Regional Water Companies, and about 29% are supplied with water from systems not managed by RWC or own systems.

¹ Report on the State of Water 2015
² Kosovo* Water Statistics 2015
In 2016, about 89.59% of population of Kosovo* was supplied with water through public systems managed by Regional Water Companies, while about 10.41% of the population did not have access to the services of water supply. In 2016, the total amount of water supply for households, industrial activities and institutions was 62.07 million m³ of water. Meanwhile, the supply of households with drinking water has increased from year to year, for example, in 2010 it was 41.88 million m³; in 2014 it was 46.72 million m³; while in 2016 it reached 52.33 million m³.

The water used for system of irrigation in agriculture varies according to the year. In 2010 it was 42 million m³, in 2014 it reached 53 million m³, and in 2017 it was 52.62 million m³. Regional Water Companies in Kosovo* are: Irrigation Company Drini JSC and Irrigation Company Radoniqi- Dukagjini JSC. The following table presents the time series of data for irrigation in agriculture.

3 Kosovo* Water Statistics 2017
4 Kosovo* Water Statistics 2017
Industrial and energetic operators are the greatest users of water. The greatest spenders of water in Kosovo* include: KEK, Feronikel and Sharrcem. These operators are mainly supplied with water from superficial accumulating lakes. Some of the smaller industrial operators are supplied with water from the public network, whereas a few of them use well-based independent water supply systems.

Kosovo* face pressure from water consumption, as shown by the river basin related Water Exploitation Index +.

Freshwater quality varies significantly across the region, which holds both pristine mountain streams as well as rivers polluted by industrial and urban wastewater, as well as agricultural run-off. Concentrations of key pollutants, such as organic pollution (measured in terms of BOD, biological oxygen demand) and ammonium, remained largely steady in the

---

5 Kosovo Water Statistics 2017
period 2000-2005. The extent of sewerage systems is low. Wastewater treatment is poor or non-existent in many urban and industrial areas.

Figure 15: Changes in urban waste water treatment in the Western Balkans.

The 10.41% of the population of Kosovo does not have access to drinking water services.

2.1.3. Energy Sector

The energy sector along with mining and agriculture have been traditionally basic pillars of the Kosovo economy. Kosovo has significant potential for electricity production. The lignite reserves of Kosovo with around 12.5 billion tons, of which 10.9 billion are exploitable, are considered to belong to largest lignite reserves in Europe. Nevertheless, Kosovo is facing serious problems in meeting electricity demand for the entire last decade even though since 1999 some improvements have been noted. Electricity is mostly generated from Thermal Power Plants (TPP) ‘Kosovo A’ and ‘Kosovo B’, while a smaller amount is generated from hydropower plants (Ujmani, Lumbardhi, Radaci, Dikanci and Burimi), (Tables below).

6 Long-term Balance of Electric Energy 2017-2026
In 2016, gross electricity generation from existing thermal power plants was 6248.8 GWh, while electricity generated in hydro power plants amounted to 234.6 GWh.

Electricity produced by Hydropowers in Kosovo* is a lower value compared to the electricity produced by Thermopowerplants.
Besides the generation of electricity, distribution and supply are also facing technical problems and loss of electricity. In the recent years, significant investments were made in the distribution system and have influenced the diminishment of losses; in 2016 they are still about 28% of total distribution demand. They include: technical losses, commercial losses, and unbilled energy in the northern area of Kosovo*. 

Figure 20: Evolution of energy efficiency compared to economic growth in Kosovo*
The major consumer of energy is the Transport sector with 61.2% followed by households (30%), industry (4.5%) and agriculture (4.2%).

In the long-term Balance of Electric Energy 2017-2026 is predicted that in 2026 the energy consumption will be 6423 GWh and the losses in network 14.3 %.

Residential buildings are the largest single consumer of energy in Kosovo* is used mainly for heating, though use of electricity for air conditioning and appliances is growing. Thus, household energy consumption will play an important role in shaping environmental impacts, in particular those arising from energy production. The main sources for domestic hestung is the following:

- Kosovo*: 60% biomass, 35% electricity, 2% oil products, 1% coal

2.1.4. Food Sector

Agriculture and rural development are one of the most important sectors, contributing to the overall economic development. These sectors bring high opportunities for Kosovo* and its citizens to alleviate poverty by creating new jobs and creating a favourable developmental environment for the residents in rural areas.

In Kosovo*, the food and agriculture sector has the potential to contribute significantly to overall economic development, poverty reduction and food safety, as in 2016 had a share of 10.5% in GDP. The share of agricultural products export value to total export value in 2016 was 15%. The total value of agricultural production including services is estimated to be 736.8 million €, where the plant products had a value of 412.3 million €, with a share of 56%, livestock products 302.4 million € or 41%, and services 22.1 million €, which had a

---

7 Green Report 2017

---
share of 3%. To further advance and improve the situation, agricultural policies are oriented towards increasing sustainable agricultural productivity, including policies that affect the agricultural business environment and the manner of using natural resources to support structural transformation and innovation in agriculture.

The area of agricultural land in use refers to the total area of arable land - fields, meadows and pastures, perennial crops and gardens used by agricultural economy, regardless of the type of ownership.

Table 7 Used Agricultural Land. Data on forest land, unused agricultural land and non-agricultural land are not included.

According to the data of Agricultural Holdings Survey of 2016, the total utilized area of agricultural land is 415,800 ha, of which the majority is meadows and pastures (including joint land) 218,800 ha or 52.6%, while arable land-fields (excluding vegetables) cover 178,900 ha or 43%.

Land used by farms in Kosovo* accounts for about 45% of the total utilized area of agricultural land. Based on the size of the surface of arable land, the farm structure is classified into four main categories:

I. Farms with very small size of less than 0.5 ha to less than 1ha constitute 10.9% of farms and had a surface of 20,279 ha.
II. Farms with a size of 1 to less than 5 ha had a share of 52.9%, which means that over half of the farms belong to this category and represent about 98,260 ha.
III. Farms with size ranging from 5 to less than 10 and 10 to less than 20 ha had a representation of 24.6% involving a surface area of 45,756 ha, and
IV. Farms with a size of 20 up to 30 ha and more participated with 11.5%, covering the area of 21,409 ha.

According to the ranking presented above, it results that about 63.8% of all farms in Kosovo* had less than 5 ha of utilized agricultural area and together these small farms account for 118,540 ha of utilized agricultural land. On the other hand, only 15.8% of farms

---

8 Green Report 2017
with size 5 to less than 10 ha owned utilized land area of 29,498 ha. When talking about the largest farms ranging from 10 to 20 or 30 and more ha, they had only 37,667 ha of agricultural land with a share of 20.3%.

Figure 22: Land Use Share

Land use distribution in Kosovo* is 47% of area arable land, 48% forests, 3% urban areas and 2% industrial areas.

In Kosovo*, the production of food has increased by 19% from year 2007 (608 million Eur) to 2016 (725 million Eur), while the food consumption increased more significantly from

Figure 23: Food Production and Consumption
year 2009 (688 million Eur) to 2016 (974.8 million EUR) by 41.7%. Exports maintain the same value almost all the years while the imports are increasing by 36.5%.

2.1.5. Ecosystem and Biodiversity

Kosovo* enjoys a rich biological and landscape diversity.

State of flora and vegetation – although many studies have been conducted on Kosovo* flora and vegetation by many national and international authors, no full inventory of flora is available and the exact number of plant species is yet to be determined in Kosovo*. According to notes from various authors, it is believed that in Kosovo* there are around 2,800 – 3,000 species of vascular flora.9

Indiscriminate woodcutting, habitat degradation and global climate changes are some of the factors exerting direct impact on various plant and animal species, some of which are at risk of extinction. Important habitats are being damaged and degraded, while ecosystems are destabilized as a consequence of human interferences, especially those close to settlements. In recent years, as a result of rampant woodcutting and forest wildfires, many species are at a risk of losing their habitat, giving ground to invasive alien species that change the floral landscape of ecosystems.

The red list of vascular flora of Kosovo* is important as it focuses attention of all entities working with nature on the gravity of threat to biodiversity; it lists species in need of protective measures and provides information that may serve as basis for further monitoring. The Red Book is important as it provides information that helps set out protection priorities at local level and build better cooperation with international environmental organizations.

9 The RED Book of Vascular Flora of Kosovo, MESP
Protected nature areas are defined as parts of nature, which require special protection in order to preserve biological and landscape diversity due to their vulnerability or due to scientific, cultural, aesthetic, educational, economic interests or due to other public interests. In order to protect, conserve and manage these natural values in a sustainable manner, the practice of declaring such areas as protected natural areas is a well-known and recognized practice.

**State of fauna** – in terms of fauna, Kosovo* has a rich diversity of species, although research in this regard is yet to be completed. The richest fauna areas in Kosovo* are all mountain massifs in Kosovo*, however, the following may be singled out: Sharri Mountains and Bjeshkët e Nemuna. The overall condition of fauna has deteriorated as a result of increased human presence in their habitat and continued threat of pouching that occurs periodically, especially during weekends in protected areas.

Deer and wild goats are the most endangered by pouching, while grey bear and wolf have seen good progress. The biggest threat of dwindling numbers and even extinction of lynx comes from quarries in the strict nature reserve “Rusenica”, which represents main habitat of this rare type in National Park “Sharri”. Some species of predator birds are also endangered.

It is estimated that in Kosovo* there are 250 types of vertebrates, 200 types of butterflies and more than taxa of macrozoobenthos of waters. The exact number of fauna species...
need to be determined based on inventorying that is planned to be conducted in future, as well as during development of Red Book of Fauna, also part of other projects.

The number of protected nature areas in Kosovo* (2016) is 173 and includes an area of 126,070.29 ha, or 11.55% of Kosovo*’s total area. Within these areas there are 19 Strict Nature Reserves ("Koretnik", "Lubeten", "Arnen Reservoir", "Maja e Rops", "Rusenica", "Kamilja", "Pisha e Madhe", Bistra etc. (NP "Sharri", PK "Bjeshkët e Nemuna"), 1 Nature Park (Pashtriku and Lake Vermicë) 146 Monuments of Nature ("Drini i Bardhë with Radavc cave", "Cave of Gadime", "Mirusha Waterfalls ", "Rugova Gorge ", " Drini i Bardhë Canyon at the Ura e Fshejtë ", Trungu i Rrapit në Marash", Shpella e Panorcit, etc.), 5 Landscapes ("Gërmia", "Shkubeza", etc.), and 1 Special Protected Zone of Birds ("Ligatina e Hencit, Radeva"). (Table below). The largest areas of protected areas are National Parks: "Bjeshkët e Nemuna" and "Sharri", Nature Park "Pashtrik Mountain and Lake Vermicë" Protected Landscapes "Germia" and "Waterfalls of Mirusha" etc.

10 Annual Report, State of Environment in Kosovo 2017
Kosovo* reports on loss of biodiversity of flora and fauna related to water due to the following causes: water pollution, insufficient water quantity, especially during dry periods, erosion, construction of hydro-powers plants, and gravel extraction from river beds.

2.1.6. Institutional setting

This section examines the institutions involved in water, in energy, food, ecosystem and biodiversity in Kosovo*.

2.1.6.1. Water Sector

Institutions involved in water management in Kosovo* are the Ministry of Environment and Spatial Planning (MESP), The Water Department (WD), The Environmental Protection Department (EPD), Kosovo* Environmental Protection Agency (KEPA), Hydro Meteorological Institute of Kosovo* (HMIK), Ministry of Agriculture, Forestry and Rural Development (MAFRD), Ministry of Economic Development (MED), Ministry of Finance (MF), Office of the Prime Minister, Inter-Ministerial Water Council (IMWC), Water Services Regulatory Authority (WSRA), Institute of Public Health of Kosovo* (NIPHK), and The Kosovo* State Environmental Inspectorate (KSEI).

The Ministry of Environment and Spatial Planning (MESP) is legally assigned with the key responsibilities in the areas of environment and spatial planning, including water resources, waste, forests, air quality, land management and planning development. MESP has a Minister with a Cabinet, a General Secretary Office, and 8 Departments (the Environmental Protection Department (EPD), and implements the Kosovo* Water Strategy 2017 – 2036.

Figure 25: Protected areas as a share of the territory.

---

11 Kosovo* Water Strategy 2017-2036
Art. 40 “- Financing the construction of water facilities and equipment”; art. 46 “Competencies for protection from harmful water floods”; “Article 47 - Protection Program from harmful water actions; Article 49 - Responsibility for the protection of water flows and facilities; Article 51 - Protection from erosion and regulation of streams; Article 55 - Torrents – Regulation of torrents; Article 57 - Notifications and Obligations; Article 68 - Zone for washing; Article 72 - Water Permit).

The Ministry includes the Planning, Housing and Construction Department (SPHCD), the Water Department (WD), the Central Administration Department (CAD), the Procurement Department (PD), the Expropriation Department (ED), European Integration and Policy Coordination Department (EIPCD) and the Law Department (LD)).

With regard to the management responsibility of the water resources sector in Kosovo*, the Water Law No.04/L-147 defines the MESP as the competent water resources management authority in Kosovo* - with particular responsibilities for:

- Water resources management and planning at the river basin district level;
- Setting standards for environmental protection (including wastewater discharge);
- Issuing permits for water use including abstraction and discharge, although it should be noted that some of these powers might be delegated to the River Basin District Authority.

Under the auspices of MESP is the Kosovo* Environmental Protection Agency (KEPA), which includes the Hydro-Meteorological Institute (HMI), the Institute for Nature Protection (INEP), the Institute for Spatial Planning (ISP) and other directorates and units.

The MESP does not have responsibilities for the provision or promotion of water utility services, i.e. water supply and/or wastewater collection and treatment.

The Water Department (WD)

The Water Department (WD) is structured along the following 3 Divisions:

- The General Water Policy Division which carries out analysis and strategic planning on the use, exploitation and protection of waters.
- The Division for Water Resources Management which carries out administrative-legal tasks for the direct application of provisions related to water economy regarding the use and protection of water from negative impacts, water protection from pollution, protection and control of water quality, water regulation and water flows, protection from erosion and streams regulation.
- The Division for River Basin Coordination, which collects data, establishes and organises database on river basins, collects information on monitoring, cooperates with other relative institutions of Kosovo*, maintains evidence on water property, governs water resources in river basin level including planning and compensation for using and polluting waters, carries out environmental impact assessments during...
development of spatial and urban plans, supervises researches, protection of public interest, controls the temporary hydro-economic permission. This Division is separated in 2 Units, which are the Unit for Drini i Bardhë Basin and the Unit for Ibër, Morava e Binçës and Lepenc Basin.

The Environmental Protection Department (EPD) is organised in the following divisions: Division for Education and Environmental Awareness; Division of Protection from Industrial Pollution; Waste and Chemical Division; and Nature Protection Division. The Division for Nature Protection includes the National Parks Sector and 5 Regional Offices located at Prishtina, Mitrovica, Peja, Prizren and Gjilan, which act as links of communication between the Ministry and the Municipalities.

The Kosovo* Environmental Protection Agency was established in 2003 under the Law on Environmental Protection it is an institution within the MESP carrying out administrative, professional, scientific support and investigative tasks in the field of environmental protection. KEPA regularly reports on the state of the environment regarding water supply, water pollution, untreated sewage disposal, eutrophication and surface water monitoring.

The Hydro-meteorological Institute of Kosovo* (HMIK) was established in 2006 as part of MESP. According to the Law on hydro-meteorological activities (Law No. 02/L-79 of 2006) HMIK is in charge for executing all hydro-meteorological activities in Kosovo* which, among others, include measurement and monitoring of hydrological information as well as publishing the information about the surface and ground water quality. The work of the Institute covers hydrology, meteorology as well as physical and chemical analysis of the environment (water, air and soil).

Ministry of Agriculture, Forestry and Rural Development (MAFRD)

The role of MAFRD, defined by Law on Irrigation No 02/L-9, is mainly to create and implement policies on irrigation and drainage, while having no direct and in-field operational activity. Specifically, the competences of the Ministry are to:

- Determine the irrigation and drainage policies,
- Develop the criteria and proposed limits for irrigation fees,
- Give the consent in coordination with KPA for transferring certain responsibilities for managing with of the primary, secondary and tertiary canals and following facilities, from the company to the association, within appropriate territories,
- Define the responsibilities and boundaries between companies and associations and between associations only,
- Represent the interests of agriculture in the area of irrigation and drainage of agricultural land in the monitoring units of public enterprises,
- Specify the responsibilities of physical boundaries between water supply companies and water user associations and between associations.
Ministry of Economic Development (MED). Pursuant to the Law on Publicly-Owned Enterprises (No. 03/L-087), Ministry of Economic Development, through its Unit on Policies and Monitoring (PMU), oversees the business of publicly owned enterprises (including the Regional Water Companies) in the Kosovo* and ensures their responsible and transparent operation.

Ministry of Finance (MF). The MF seeks to ensure responsible, fair and transparent management of public funds and to advise the Government of Kosovo* on its economic and fiscal policies.

Office of the Prime Minister. The Prime Minister is heading the Inter-Ministerial Water Council (IMWC). The IMWC (previously WTF) acts as a committee of relevant Government Ministers chaired by the Prime Minister, with responsibility for improving the situation in the water sector through the development of sector policies and action plans based on good practices.

Inter-Ministerial Water Council (IMWC). Article 15 of the new Law on Waters defines the establishment of an Inter-Ministerial Water Council (IMWC) as an independent body that shall act as coordinating and decision-making body in order to further promote the development of Kosovo*’s water sector.

The Water Services Regulatory Authority (WSRA) (previously Water and Wastewater Regulatory Office) is an independent regulatory body accountable to the Assembly of Kosovo* and is the key licensing and economic regulator for the water services sector - whereas the MESP acts as the environmental regulator. Since the beginning of 2013 the WSRA is no longer responsible for regulating solid waste services as the responsibility for solid waste management went back to the municipalities.

The Institute of Public Health of Kosovo* (NIPHK) is a body within the Government of Kosovo* with responsibilities for a wide range of issues related to public health, including the monitoring and implementation of standards of the potable water in Kosovo*, in compliance with the requirements of Article 7 of the Law on Public Health No. 2007/02 L78.

The Kosovo* State Environmental Inspectorate (KSEI) was created with the Administrative Instruction (AI) No. 02/2004-MESP “on the Establishment of Environmental Protection Inspectorate”, dated 18.02.2004.

The water inspection tasks are identified in the Water Law 04/L-147, from article 94 to article 105. Part of the inspection activities is delegated to municipalities.

2.1.6.2. Energy Sector

The main institutions include Ministry of Economy Development (MED), Energy Regulatory Office (ERO) and the Independent Commission for Mines and Minerals (ICMM). The main energy enterprises include the Kosovo* Electricity Transmission System and Market
Operator (KOSTT JSC), Kosovo* Energy Corporation (KEK JSC) and district heating companies.

**Ministry of Economic Development** among others shall exercise the following competencies: To draft policies and strategies on the overall economic development of Kosovo*; To support the development of market economy; To support the Government in exercising its shareholder duties in POE on behalf of Government; To prepare and monitor the implementation of legislation in the sectors of energy and mining; To prepare policies on Energy Efficiency and Renewable Energy Sources in compliance with respective EU Directives; To monitor energy systems; To cooperate in the preparation and implementation of international agreements in the sectors of energy, mining, and To perform other tasks allocated to the former-Ministry of Energy and Mining.

**Energy Regulatory Office (ERO)** - as an independent agency of Kosovo*, established by the Assembly of Kosovo* in accordance the Constitution of Kosovo*. ERO is primarily responsible for approving tariffs, conducting/facilitating the process of development of new generation capacities, monitoring the energy markets, and preparing and/or adopting energy sector regulations, including codes and rules. ERO ensures transparency and accountability of the energy market players, and engages with them to improve their economic, social and environmental performance.

**The Independent Commission for Mines and Minerals (ICMM)** was established in January 2005 by UNMIK Regulation 2005/2 – representing “Independent Regulatory Agency” in the Mining sector. ICMM is responsible for issuing exploration and exploitation licenses for minerals including lignite. It is also responsible for supervision of the issued licenses.
Figure 26: Organization Structure of Ministry of Economic Development
2.1.6.3. Food Sector

The mandate of the Ministry of Agriculture, Forestry and Rural Development is to: Develop polices and implement laws for development of agriculture including livestock and plant production, forestry and rural development and setting of standards for maintenance; Prevention of fire, disinfection form the insects and different diseases, license for felling of tree and control of hunting and fishing; Develop polices in the field of watering including also the projects for the planning of irrigation; Develop polices and implement laws particularly the utilization of land with the purpose of its protection; Take part in the activities of protection of the environmental that have to do with forestry, hunting, fishing and management of resources of the water.

Part of the Ministry Kosovo* Forest Agency and Agency for Agricultural Development and Agriculture Institute in Peja.
2.1.6.4. Ecosystem and Biodiversity

Ministry of Environment and Spatial Planning (MESP).

- The Ministry’s mandate is defined by Regulation No. 02/2011 for administrative responsibilities of the Office of the Prime Minister and other Ministries. It has the following responsibilities regarding environmental protection:
  - Compiles and follows up the implementation of policies and programmes identifying and reducing environmental pollution;
  - Participates in the development of strategic documents;
  - Co-ordinates activities to promote policies;
  - Sets environmental norms and standards and issues instructions meeting international standards;
  - Oversees the implementation of these standards including inspection and other services as necessary;
  - Manages the use and development of environmental infrastructure;
  - Promotes community participation, initiatives and development activities;
  - Develops policies, implements laws and supervises environmental protection activities, including water resources, air, soil and bio-diversity;
  - Encourages and participates in developing and implementing public information campaigns and other promotional activities to raise public awareness and compliance with environmental protection standards;
  - Supervises and assesses the state of the environment, particularly the impact of industrial activity, of public services and of economic activity;
  - Develops policies for managing water resources and supervises their implementation.
2.1.7. Legislation

2.1.7.1. Water Sector

Law on Waters of Kosovo* (No. 04/L-147)

Purpose of this Law is to: provide sustainable development and utilization of water resources that are necessary for public health, environmental protection and social-economic development of Kosovo*; establish procedures and guiding principles for the optimal distribution of water resources, based on the use and purpose; and ensure protection of water resources from pollution, overuse and misuse.

The secondary legislation that is currently regulating the water and wastewater management sector in Kosovo*:

- AI No. 2/99 “on Testing and Enforcing Minimum Standards of Drinking Water Quality”;
- AI No. 24/05-MESP “on the Content, Form, Conditions and Method of Issuing and Retaining the Water Permit”, dated 11.10.2005;
- AI No.06/2006 “for water payment structure”, dated 02.2006;
- AI No. 06/07-MESP “on the Content of Water Infrastructure”, dated 08.06.2007;
Nexus Mapping Study for South East Europe – Report for Kosovo*

- AI No. 13/07-MESP “on the Criteria’s for Defining the Water Protected Zones and their Protection Measures for Water Resources used for Drinking Water”, dated 23.11.2007;
- AI No. 08/26 “on Limit Values of Effluents Discharged in Water Bodies and in Public Sewage Network” approved by the Government of Kosovo* (GoK) on 09.07.2008;
- AI No. 12/2013 “Water Information System”, dated 17.06.2013

Significant/key cross references with energy Agriculture and land use and ecosystems

Chapters on water use, water resources management, water river basin management, water facilities, and protection from harmful water actions and water protection are cross references to the agriculture and land use, energy and ecosystems.

**Law No 2009_03-L-025 on environmental protection**

The Law on Environmental Protection represents the legislative basis for Environmental Protection.

The purpose of this law is rational use of natural resources and limitation of pollution discharge on environment, prevention of damage, rehabilitation and improvement of defective environment. The Law regulates, inter alia, the policy principles of environmental protection, Kosovo*’s strategy for protection and sustainable development of the environment, environmental protection programs, authorization by the government to establish discharge and emission limit levels, measures for the rehabilitation of the environment, EIA consent, permitting and authorization, environmental monitoring and information. By this law it is regulated the role and responsibilities of the Kosovo* Environmental Protection Agency (KEPA) and of the Kosovo* State Environmental Inspectorate (KSEI). In September 2011, the administrative instruction related to the organization and structure of the Kosovo* Environmental Protection Agency (KEPA) was signed, incorporating the Hydro Meteorological Institute (HMIK) under KEPA.

Significant/key cross references with Water Agriculture and land use and ecosystems

Chapters such as: Protection and use of natural resources; Documents for Environmental Protection; Measures and Conditions for Environmental Protection; Specific Measures for Environmental Protection; Measures for Protection from Hazardous and Pollution Cadastre, are key cross references.

**Law No. 04/L-125 ON HEALTH**

The main purpose of this law is supervision of the water and food quality control services in order to protect consumers, in coordination with the competent ministries, in compliance with the law.

**Significant/key cross references with Water**
Law No.02/L-9 for the Irrigation of Agricultural Lands and Law No. 03/L-198 on the amending and supplementing of Law NO.02/L-9

The main purpose of law is to regulate irrigation of agricultural land in Kosovo*.

It includes significant/key cross references with Water, Agriculture and land use and ecosystems.

Law No. 04/L-111 on Amending and supplementing the law No. 03/L-087 on Publicly Owned Enterprises (PEO)

The amended Law has taken into consideration the greater representation of the Municipalities of Public Enterprises as well has left the possibility for establishment of Public Local Enterprises. In accordance with these changes, to the Law on Public Enterprises, Government also in 2012, has issued the 'Rule with No.02/2013 on critters for establishment of Local Public Enterprises and Municipalities participation on the Boards of Directors of Water Regional Companies.

Significant/key cross references with: Water, Agriculture and land use

Law for Nature Protection

This law creates the legal basis for the protection of nature, its sustainable development and in particular: the protection, preservation, renewal and sustainable use of natural and renewable natural resources; revitalization of damaged areas of nature or parts thereof and compensation for damages; the preservation and restoration of ecological balance in nature; establishing a system for planning, management, monitoring, information and funding for nature protection; implementation of the goals defined in the policies of conservation; reduction of utilization of and damage to flora and fauna, especially those of particular importance, rare and endangered species and their habitats; the right to public information and public participation in the field of nature protection; the right of citizens to a healthy environment, rest and recreation in nature; ensuring biodiversity through the conservation of important natural habitats and important species of flora and fauna at favourable conservation status.

Significant/key cross references with: Water, Agriculture and land use

2.1.7.2. Energy Sector

LAW No.03/L –184 ON ENERGY
The purpose and Scope of this law is to establishes the general principles and rules that will govern activities in the energy sector in Kosovo*, with the aim to achieve a safe secure reliable, and high-quality supply of energy, to provide the conditions for functioning energy markets, and to also promote a more efficient use of energy, increased renewable energy sources and co-generation, and improved environment protection during energy activities.

The scope of this law includes electricity, heating, natural gas, and renewable energy sources, and the law provides for: the development and implementation of an energy strategy, including forecasting of energy balances and policy on energy efficiency, renewable energy sources and co-generation; activities for the regulation of the energy sector to be carried out by the Energy Regulatory Office; the roles of the Government of Kosovo*, of local governments, and of other institutions, and provides for wider public participation in the development of energy strategy and its implementation.

Cross-references to: Water, Agriculture and land use, and Ecosystems.

**Law No. 03/L-116 ON CENTRAL HEATING**

The purposes of this law are to: set conditions for developing a sustainable and competitive market for district heating under principles of free market economy, fulfilling environmental protection; set conditions for a safe, reliable and efficient supply of heat for maintaining the indoor temperature at a suitable level, eventually providing hot tap water permanently around the year for domestic customers as well as satisfying the demand of the institutional, commercial or industrial customers; and set conditions that allow the final customers to enjoy the right to be connected and supplied with heat according to standards and at an economic price.

Cross-references to: Water.

**2.1.7.3. Food Sector**

**Law No. 02/L-26 on Agricultural Land**

The purpose of this law is to determine the use, protection, regulation and lease of agricultural land for the purpose of permanent preservation and protection of agricultural potential, based on the principles for a sustainable development.

By this law is regulated that agricultural land shall be used only for agricultural production and exceptionally may be used for other purposes only under certain conditions for construction of domiciles, industrial plants, railways, road communication, water reservoirs, airports, various installation lines or other facilities which permanently unable utilization of agricultural land for agricultural production is considered as permanent change of use of agricultural land.

Cross-references to: Water, agriculture and land use and ecosystems
Law No.04/L-040 on Land Regulation

The purpose of this Law is the establishment of legal basis to undertake measures and activities on voluntary basis for creation of the biggest parcels and regulation of the agriculture land, forests and forest lands in the function of more rational and economic use.

The objectives of this law are: defragmentation of land for more rational and economic land use; creation of parcels of regular geometrical shape; improvement of land through implementing agro-technical, agro-melioration and hydro melioration measures; improvement of infrastructure, including access to public infrastructure; reforestation of land of lower quality or polluted land; new land measures; creation of new cadastre.

Melioration measures in this law means improving agricultural land quality and features through calcification, irrigation, drainage, desalination, melioration fertilization, re-cultivation of damaged and degraded lands. Melioration measures on land regulation among other measures are construction and maintenance of irrigation and drainage schemes which is linked with the land use and water regime;

Cross-references to: Water, agriculture and land use

Law No.02/L-9 for the Irrigation of Agricultural Lands and Law No. 03/L-198 on the amending and supplementing of Law NO.02/L-9

The purpose of this Law is to establish legal infrastructure for setting up and functioning bodies offering services, and users of services as well as their organization in order to create optimum conditions for irrigation of agricultural land in Kosovo* and its protection against excessive waters, aiming at increased yields of agricultural products.

This law regulates the organization and administration of irrigation and drainage of agricultural land in Kosovo*, competences and delineation of responsibilities of irrigation and drainage entities, monitoring irrigation companies, establishment water use associations and federations, and other issues related to irrigation and drainage.

Cross-references to: Water, agriculture and land use

Law on Agriculture and Rural Development (L-03/098)

The purpose of this law is to establish a policy for the development of agriculture and rural development. Objectives of the agricultural and rural development are: Competition in agriculture and rural areas; income growth for rural population by increasing their welfare through improving working and living conditions; quality of food products, by ensuring that food chain is a sustainable quality and meets standards; sustainable protection of the environment and food security and food safety.

Support to improve competitiveness in agriculture and agro -food industry based on investment and supporting measures through projects that improve the situation
regarding: development of professional training for human capacity building to meet rural needs; restructuring of physical potential in agro–rural sector; management of water resources for agriculture; improve production, processing and marketing of agricultural products.

Cross-references to: Water, agriculture and land use

**Law No. 02/L-85 on Fishery and Aquaculture**

This law regulates the management of fishing resources and activities of fishery and aquaculture exercised in the waters of the territory of Kosovo*.

The main objectives of this law are: Rational exploiting of fish in fishing waters in order to protect biodiversity; Catching and cultivating fish only according to the terms foreseen by this law and by-laws derived from this law; Designating management conditions and supervising fishing resources; Designating measures for fish protection; and Designating rights and obligations of legal entities or physical persons that exercise fishing and aquaculture activity.

Fishing waters are all waters in Kosovo*’s territory except waters proclaimed as protected territories by special laws, fish ponds, accumulations, lakes or springs the source of which is protected by laws for potable water supply, lakes or water springs reserved for potable water supply.

Cross-references to: Water, agriculture and land use and ecosystems

**Law No 2003/3 on Forests in Kosovo*”**

The main purpose of this law is to create legal framework for integrated management of forests and forest land in such a way as to provide a valuable yield and at the same time preserve biodiversity; forest protection; conservation, and sustainable development of all types of forests; reforestation activates; and management of non-wood forest products.

Cross references to the water, agriculture land use and ecosystems are in the chapters regulating protection of forest and non-wood products and all reforestation activities and management plans.

Cross-references to: Water, agriculture and land use and ecosystems

**Law No. 02/L-53 on Hunting**

This law regulates sustainable management, breeding, protection, hunting and use of wild fauna as natural wealth of general interest which enjoy special protection.

Protection of integrity of ecosystem and ecological balance, adequate protection of wild animals, ensuring their welfare and conditions for economic utilization of resources, need for safety and ethical standards of hunters.
Cross-references to: Water, agriculture and land use and ecosystems

2.1.7.4. Ecosystem and Biodiversity

Implementation of the Law of Nature Protection is a responsibility of Ministry of Environment and Spatial Planning. Under are cited some of the primary Laws.

- Law on Environmental Protection No. 03/L-025
- Law on Strategic Environmental Assessment (SEA) No. 03/L-230
- Law on Environmental Impact Assessment (EIA) No. 03/L-214
- Law on Nature Protection No.03/L-233
- Law on Air Protection from Pollution no. 2004/30
- Law on Waste no 02/-L-30
- Law for Nature No. 03/L-233
- Law No. 04/L-086 of National Park "Bjeshket e Nemuna"
- Law No. 04/L-087 of National Park "Sharri"
- Law for hunting 02/L-53,
- Forest Law no. 2003/3, 2004/29
- Law on Chemicals No. 2007/02-L116 , UNMIK Reg. 2008/8
- Law on Biocide Products No. 03/L-119

2.1.8. Policies and strategic documents

To make a better evaluation of resources and to define the collaboration between sectors like water, food, energy, biodiversity the Ministries responsible for each sector have developed strategic plans.

Strategies developed recently in Kosovo* are:

2. Energy Strategy of Kosovo* 2017-2026
3. Long-term Balance of Electric Energy 2017-2026
4. Program for Agriculture And Rural Development 2015

2.1.8.1. Water Sector

**KOSOVO* WATER STRATEGY Document 2017-2036**

The main purpose of this document is to: provide sustainable development and utilization of water resources that are necessary for public health, environmental protection and socio-economic development of Kosovo*; establish procedures and guiding principles for the optimal distribution of water resources, based on the use and purpose; ensure protection of water resources from pollution, overuse and misuse; determine the institutional structures for managing the water resources.
In accordance with the principle of integrated water management, the Strategy has a broad multi-sector approach that endeavours to consider all significant aspects of water management in Kosovo* including:

Water services to citizens and economic entities urban areas (water supply, wastewater collection, wastewater treatment and surface water drainage); Irrigation; Flood Defence; Drought Prevention; Erosion; Fisheries; Tourism, Recreation and Thermo-mineral Water and Generation of Energy from Hydropower Plants.

The Strategic Objectives of this Strategy are: Efficient Exploitation of Water; Effective Protection of Water; Effective Protection from Water; Efficient, Effective and Equitable Governance; In addition, and bearing in mind the European Perspective of Kosovo*, a horizontal objective is established timely Approximation with the requirements of EU legislation.

Cross-references to energy, agriculture and land use and ecosystems.

2.1.8.2. Energy Sector

Energy Strategy of Kosovo* 2017-2026

The Energy Strategy of Kosovo* aims at achieving effective management of existing energy resources and protection of the environment. It focuses on enhancing the security of energy supply according to European standards, as well as on the diversification of energy resources. This strategy aims also at stimulating rational utilisation of energy, promoting energy efficiency, promoting development of renewable energy resources and introduction of new technologies that do not cause irreparable damage to the environment, thus respecting the application of internationally accepted environmental standards. The goals and measures provided in this document establish a clear vision on some key aspects of high importance for the development of the energy sector during the decade 20017-2026.

Cross-references to: Water, agriculture and land use

2.1.8.3. Agriculture

Program for Agriculture and Rural Development 2015

The agriculture sector in Kosovo* plays a very important role in offering opportunities in employment and income generation. SWOT analysis for agriculture of Kosovo* stresses that import substitution and free access to the EU market, as well as important opportunities for improvement of income from agriculture in Kosovo*. However, this potential will be realized only if farms are able to compete with market prices in the region and the EU.

General Objectives of the program - Increasing competitiveness of Kosovo*’s agriculture and import substitution; Creation of new jobs and increasing the employment in rural areas; Support of farmers in the selected sectors, aiming to align with the rules, standards,
policies and practices of the EU; Supporting economic, social and territorial development aiming at sustainable and inclusive growth, through the development of physical capital; Addressing the challenges of climate change through the utilization of renewable energy.

Specific objectives of the program per each specific sector like fruits and vegetables, meat, milk, grape, poultry etc. are: production growth for commercial purposes; Improvement of the quality in order to fulfil the relevant standards and those of the EU; Modernization of farms through the use of new equipment/technologies; Production of renewable energy; Reducing the emission of nitric oxides and methane through proper treatment of organic manure and non-pollution of surface and ground water and Improving the integration of farmers with buyers of their products.

Cross-references to: Energy, water, agriculture and land use and ecosystems.

2.1.8.4. Environment & Biodiversity

The long-term goals for the environmental sector are the following:

- a better quality of life for all citizens;
- Sustainable economic, social and cultural development.

The overall objective is to reduce pollution to levels which meet the EU acquit and international standards.

The long term overall objectives are: Reducing pollutant emissions including environmental degradation and damage and minimizing or prohibiting those economic activities that are dangerous for human health and the environment; Protection of bio-diversity and actions to preserve the general ecological balance within Kosovo*; Rational and sustainable use of natural resources including agricultural land; Protection of valuable natural landscapes, such as national parks and monuments.

The main objectives in water sector are: Completion and harmonization of water legislation; Construction of waste water treatment plants (WWTP) and extension of the sewerage networks; Rehabilitation and extension of drinking water infrastructure; Riverbed regulation and protection; Improvement of surface water monitoring; Establishment for underground water monitoring.

The main objectives on soil/lands are: Protection of the agriculture land from urbanization; Preparation of the strategy for sustainable land management and land use; completion and harmonization agriculture land legislation; Prevent and reduce further degradation of pollutants and soil erosion; Inter- institutional coordination for the protection of agricultural land; Improvement of the land management as a natural recourse.
The main objectives for natural heritage and biodiversity are: Completion and harmonization of new legislation on nature protection; Improvement of management of protected areas with the high biodiversity; Enforcement Nature Protection Law 03 / L - 233, supplemented by secondary legislation; Strengthening managing capacities for the authorities of protected areas; Preparation of spatial and management plans for protected areas; while respecting the conditions for the protection of nature; Education and raising the awareness of the population in protected areas; Implementation of NEAP for biodiversity (2012-15); Drafting of read book for flora and fauna;

The main objectives for energy are: Completion and harmonization of new legislation EU; advanced clean technologies for the production of electricity from fossil resources; Encouraging the production of energy from alternative sources; Increase efficiency in energy production and consumption.

Cross-references to: energy, water, agriculture and land use and ecosystems.

2.1.9. Establishment of coordination bodies or instruments

In general, Kosovo* has an established administrative system where several authorities share the competencies for the specific Nexus sectors, with one ‘line’ authority leading initiatives. At the highest level, this is usually a Ministry, with a number of agencies and institutions in supporting roles. Some cases are:

- Kosovo* has a rather traditional set-up with the water resources management split between different Ministries: The Ministry of Environment and Spatial Planning (MESP) is legally assigned with the key responsibilities in the areas of environment and spatial planning, including also water resources. The Ministry of Economic Development is responsible to prepare policies on Energy Efficiency and Renewable Energy Sources in compliance with respective EU Directives. The mandate of the Ministry of Agriculture, Forestry and Rural Development covers irrigation development, and it takes part in activities of protection of the environmental that have to do with forestry, hunting, fishing and the management of resources of the water. In order to advance the water sector reform, the Government of Kosovo* has established the Water Task Force (WTF) in 2008 (see Box 3). Kosovo* has also created a cross-sector Committee for Climate Change with the responsibility to follow up the implementation and enforcement of strategic documents and of the action plan for climate change in full compliance with the requirements of UNFCCC and Kyoto Protocol. In addition, the Inter-Ministerial Working Group (IMWG) enhances the Government coordination on climate change policies to ensure it recognizes the country’s vulnerability and the adverse effects from the climate change, and it develops appropriate short-, mid- and long-term mitigation and adaptive measures and actions to ensure that the country is able to cope with climate change impacts. IMWG has three subgroups: (1) Subgroup for Greenhouse Gas Inventory - led by the Environmental Protection Agency (KEPA), (2) Subgroup for Greenhouse gases
reduction - led by the Ministry of Economic Development (MED), and (3) a Subgroup for adaptation - led by MESP - Department of Environment Protection (DEP)\textsuperscript{11}.

Box 1: Kosovo’s* “Inter-Ministerial Water Council”

In order to advance the water sector reform, the Government of Kosovo* has established the Water Task Force (WTF) in 2008. WTF was an inter-ministerial decision-making body with the tasks to advance the water sector related policy and strategy framework and related action plans and to serve as platform coordinating the efforts of the domestic and external actors in reforming the sector (http://www.kryeministri-ks.net/tfu/?page=2,1).

During the 3\textsuperscript{rd} meeting of the WTF on March 24th, 2010 it was agreed that the WTF should be transformed in a more permanent institution. Accordingly, an Inter-Ministerial Water Council (IMWC) was introduced in the draft of the new water law that was ultimately approved by the Parliament in March 2013 and promulgated by the President in April 2013. Consequently, the Government of Kosovo* decided to establish the IMWC in its Cabinet meeting of September 19th, 2013. Based on this decision, the IMWC is anchored at Prime Minister Level, made up of Ministers and ensures the overall coordination of water sector development.

According to the provisions of the water law (articles 15-19), the “IMWC is a coordinating and decision-making body that examines the systematic issues of water, harmonization of the different needs and interests, and proposes measures for the development, utilization and protection of water resources and system of Kosovo*”. In terms of highest pertinence, the IMWC members shall consist of the Ministers of Economic Development, of Environment and Spatial Planning, of Local Government Administration and of European Integration (four Line Ministries) and headed by the Prime Minister. Donors (Switzerland as lead coordinator of water donor community, plus another active sector donor) are non-voting members of the IMWC.

The Council has its Secretariat which is supported by the Swiss Cooperation Office through two full-time permanent advisors and two part-time intermittent advisors (a legal expert and a water economics expert) seconded to the Office of the Prime Minister, as well as an administrative assistant and other international and short-term experts, as per needs. These advisors and experts shall actively and regularly assist on demand the IMWC in its work and report to the IMWC Chairperson.

The economies usually lack Nexus coordination bodies and instruments, which could manage trade-offs and promote synergies. In some administrative set-ups, coordination bodies have been identified, which address some of the Nexus sectors:

Kosovo*: Article 15 of the new Law on Waters defines the establishment of an Inter-Ministerial Water Council (IMWC) as an independent body that shall act as coordinating and decision-making body in order to further promote the development of Kosovo’s* water sector.

Specific coordination action has furthermore been in place for the set-up of strategies and plans, such as the either the drafting of the Sava River Basin Management Plan or the economies’ Rural Development Programmes, though it is unclear how strong the integration of the different Nexus sectors has been and how it has focused on synergies beyond negotiations/trade-offs. Policy development via regulation, strategies or plans is characterised by:
- More or less formal cooperation, which does however not necessarily translate into policy integration;
- Isolated efforts;
- Lack of common targets;
- Overlapping responsibilities and competing objectives among local and central governments.

The following overview can be provided:

2.1.11. Climate change adaptation

Kosovo* is not yet recognized by the United Nations system, so it is not a signatory to international conventions such as the UN Framework Convention on Climate Change (UNFCCC). In 2015, Kosovo* signed a Stabilization and Association Agreement with the European Union, and is working to align its legislation with EU legislation as part of the EU approximation process, including environment and disaster risk reduction.

The responsible authority for environment and climate change policy is the Ministry of Environment and Spatial Planning (MESP). Based on an agreement between the UNDP and the MESP, as of December 2012 MESP jointly with UNDP coordinates donor support to the climate change agenda for Kosovo*. Kosovo* has no register of sources and emissions of GHGs yet and it also has not identified the base year from which GHG emissions will be estimated. The Greenhouse Gas Inventories for 2008 and 2009 are one of the first initiatives in Kosovo* contributing to the global efforts to minimize the human impact on the climate change. This project continues with further capacity building activities on GHG monitoring and reporting in 2013-2014. Kosovo* has not yet started to submit Communications to the Secretariat in the UNFCCC.

</tbody>
</table>

12 Climate Change Strategy 2014-2024
District heating and industrial co-generation
- Reconstruction and extension of district heating networks
- Introducing renewable energy and high energy efficiency (combined heat and power)
- Co-generation on industrial sites for both district heating and industrial needs

Thermal power plants and coal mines
- Improving efficiency of existing TPPs
- Increasing the efficiency of production of electricity through replacement of TPP
- Preventing self-combustion of lignite

Waste management
- Separate waste collection and recycling
- Using non-hazardous solid waste (domestic waste, tires, etc.) as alternative fuel production
- Home composting

Agriculture
- Manure storage, preparation and application methods
- Proper application of mineral and organic fertilizers
- Organic production

Forests and nature
- Implementing Climate Protection Strategy in the Forest Sector in Kosovo*
- Sustainable forest management increasing resilience of forests
- Protection from forest fires
- Afforestation and reforestation of bare lands
- Promotion of wood products
- Integrating carbon sequestration into forest management
- Parts of forests and protected areas left to natural development
- Designation and development of protected areas

Kosovo* has developed the Climate Change Strategy 2014-2024 which is a document summarizing the mitigation and adaptation measures that will boost sustainable development. It is crucial for responding and anticipating the impacts of climate change in Kosovo*. These current and expected impacts include:

- Total emissions of all greenhouse gasses in 2008 in Kosovo* reached 9.5 Mt CO2 eq. They increased by almost 11% to 10.5 Mt CO2 eq. in 2009. This relatively high increase was driven almost solely by increased fossil fuel combustion.
- In comparison with other countries in Europe Kosovo* has relatively low emissions per capita (5.7 t CO2 equivalent per capita per annum in 2008, while greenhouse gas emissions per unit of GDP (0.84 kg CO2 equivalent per EUR in 2008) are higher. Per capita emissions are just over half of the EU average (9.93 t) and emissions per unit of GDP are almost double of those in the EU average (0.4 kg/EUR).
- These statistics illustrate the economic and social challenges for Kosovo* in the trap with low but growing emissions, and even lower GDP per capita. This situation justifies the application of the principle of common but differentiated responsibility
defined in Article 3.1 of the United Nations Convention on Climate Change (UNFCCC).

- Higher temperatures will cause heat waves and forest fires more likely. Since 2000 there have been an increasing number of forest fires in Kosovo*;
- Increased temperatures, more uncertain rainfall, and reduced runoff combined with socioeconomic developments and increased use of water resources will heighten exposure to drought;
- Ecosystem degradation and reduction of ecosystem services.

To reduce the risk and damage from current and future impacts of climate change in a cost-effective manner and to exploit potential benefits stemming from climate change. Considering the large uncertainty regarding the current level and future projections of GHG emissions in Kosovo* it is difficult to set a meaningful mitigation objective in terms of quantitative emission reduction targets. For the same reason, and for the reason of uncertainty of future social and economic development of the country, it is also difficult to set LED objectives for long term (e.g. 2050 as in the EU Roadmap). Because of this the mitigation objectives are set in qualitative terms as follows:

**LEDC Objective 1:**

Kosovo* will develop the capacity to fulfil its future obligations under the UNFCCC and as a member of EU.

**LEDC Objective 2:**

Kosovo* will slow the increase of GHG emissions through

- increased energy efficiency in all sectors,
- development of renewable energy sources and
- sustainable use of natural resources

**AC Objective 1:**

To introduce new and improve current mechanisms of disaster risk reduction, especially important for sectors of economic significance that are particularly vulnerable to climate change impacts;

**AC Objective 2:**

To enhance adaptive capacity1 of natural systems, in particular vulnerable ecosystems, and society, in particular vulnerable communities, such as poor farmers, marginal groups and women, to address the climatic impacts and related risks on their lives and livelihoods;

**AC Objective 3:**
To build the capacity of local partners, actors and stakeholders to integrate climate change issues and adaptation into the local development processes, and empower them for addressing climate change issues.

2.1.12. Nexus-related overview of Trans boundary basins/ aquifers

The following initiatives have been carried out.

Memorandum of Understanding on Environment (No. 591/12) between Ministry of Environment, Spatial Planning of Kosovo* and Ministry of Environment and Physical Planning from Republic of Macedonia

Based on this Memorandum parties will cooperate in the following fields: Nature protection (biological, geological and biodiversity protection, protection of protected areas,
protection of relics and endangered species of plants and animals); Spatial planning in order to harmonize all major interventions including road infrastructure, joint environmental projects and other projects of mutual interest; Protection of air pollution; climate change issues; protection of transboundary waters; wastewater management issues with the focus on dangerous substances and other dangerous chemicals; Environmental Impact Assessment and Strategic Environmental Assessment; Flooding risk management; prevention of industrial accidents; cooperation in the implementation and respect of the rights and obligations arising from by International the conventions; etc.

Main activities: Identification and implementation of joint programs and projects in fields of cooperation; Exchange of information on measures in the fields of cooperation; Organizing conferences, symposia, seminars and meetings at the experts level, exchange of experiences and professional literature; exchange information in the field of legislation; scientific cooperation, Common approach in negotiations with the International Organization for areas of cooperation; Implementation of joint projects and Exchange of experiences in order to access EU founds for transboundary projects. Duration of this Memorandum is five years. Following this Memorandum last year (2014) was implemented “Lepenc River protection via Introduction of Integrated Water Management” project financed by ENVSEC.

**Cooperation with Government of Albania (UN-administered region, Security Council resolution 1244)** regarding transboundary water issues began in September 2010.

The following groundwater bodies of XK are shared:

### 2.1.13. Turning Nexus trade-offs to synergies

In order to avoid trade-offs and foster synergies between the different Nexus policies, regulation, strategies and plans shall promote an early and wide integration of the aspects and concerns of the related Nexus sectors in own developments.

Recent policy developments in the Water and Food/Agriculture sectors show a higher integration of objectives and targets of the other sectors, than Energy or Ecosystems, being the latter focused on ways to minimize the negative impacts of economic development on biodiversity.
Table 14: Integration of Nexus aspects in recent regulation, strategies or plans for the Nexus in Kosovo*.

Explanation: “high” indicates identification of synergies, “medium” indicates identification and assessment of conflicts, risks and constraints; “low” indicates inclusion of concerns, needs or supply aspects; and “no” none of the previous (only textual mentioning). Note that a more detailed analysis can lead to a higher scoring.

The legislation on the different Nexus sectors in Kosovo* is mainly from the beginning of the 2000 decade; except the 2013 Law on the Water Information System. Numerous mentions and cross-references are included in the regulation, such as e.g. reference to Drainage and Irrigation management in Law 02/L-9, the references to sustainable protection of the environment and irrigation water management in L03/098 (Agriculture and Rural Development) and the Forest Law (2003/3) referring to biodiversity protection. However, the references focus mainly on concerns, thus have a low level of integration.

Regarding strategies and plans, all sectors have been subject of recently developed documents. The main purpose of the Kosovo* Water Strategy 2017-2036 is to provide sustainable development and utilization of water resources that are necessary for public health, environmental protection and socio-economic development, as well as to ensure water conservation. Integration is included in the Program for Agriculture and Rural Development 2015 as to produce renewable energy.

2.1.14. Integration of climate resilience aspects in sector policy, regulation and management

Climate change resilience can be fostered by a varied set of measures addressing aspects like water scarcity, droughts or floods, temperature increase\textsuperscript{13}, heat waves, plagues and diseases, and ranging from efficiency increases to changes in production or management. Lists of options for action are usually included in the reporting to the UNFCCC.
Overall, climate change resilience has only partially been included in the sector-specific strategies/plans of Kosovo*. This can lead to situations where the sectors are not ready to deal appropriately with climate change.

<table>
<thead>
<tr>
<th></th>
<th>Kosovo*</th>
</tr>
</thead>
<tbody>
<tr>
<td>Water</td>

<tr>
<td>Food/Agriculture</td>
<td>no</td>
</tr>
<tr>
<td>Ecosystems</td>
<td>no</td>
</tr>
</tbody>
</table>

Table 15: Overview on the integration of climate resilience in recent regulation, strategies or plans in Kosovo*.

Explanation: “yes” indicated climate change being integrated; “high” indicates contributions to climate change resilience, “low” indicates recognition of climate change constraints; and “no” none of the previous (only textual mentioning). For some of the documents, a screening assessment whether the considerations are of ‘high’ or ‘low’ relevance has been carried out.

The Program for Agriculture and Rural Development 2015 addresses the production of renewable energy, and the reduction of emissions, but no adaptation activities for increased resilience.

2.1.15. Integration of resource use efficiency aspects

Resource efficiency is an approach to produce more from less input, use resources in a sustainable way, and manage them more efficiently throughout their life cycle. Circular economy is an approach aiming to keep resources within the economy when products no longer serve their function so that materials can be used again and therefore generate more value (Di Maio et al., 2017); and thereby supports resource use efficiency.

Improving the efficiency of water use is usually presented as an opportunity for large water savings, particularly in the agricultural sector. The recent modernisation of irrigation practices in Spain highlights the rebound effect of Jevons paradox – the fact that efficiency increase does not translate into reduced consumption - is one of many possible consequences of efficiency improvements (Dumont et al., 2013).

Policies that encourage the adoption of more efficient irrigation technology may be appealing under the premise that they will decrease the amount of applied water required to maintain current crops and yields. However, this ignores the possibility that farmers may adjust their behaviour in response to the change in irrigation efficiency, for example by switching to higher-revenue crops that are more water intensive, or by irrigating previously unirrigated land, resulting in an increase rather than a decrease in water consumption (Sears et al., 2018).

Box 2: Water efficiency, water savings and the Jevons paradox
Resource use efficiency is included in the competencies of the sector administrations in place. However, resource efficiency seems to be so far only relevant for the energy sector, and some minor consideration is given to water use efficiency in irrigation, but not to water reuse, as a component of circular economy. Additionally, energy efficiency initiatives are often secondary when compared with the generation of new renewable energy.

<table>
<thead>
<tr>
<th>Resource Efficiency Considerations</th>
<th>Kosovo*</th>
</tr>
</thead>
<tbody>
<tr>

</thead>
<tbody>
<tr>
<td>Electricity</td>
<td>Decrease &gt;50%</td>
</tr>
<tr>
<td>Manufacturing</td>
<td>Decrease &lt;50%</td>
</tr>
<tr>
<td>Irrigation</td>
<td>No/slight change</td>
</tr>
<tr>
<td>Domestic</td>
<td>Decrease &gt;50%</td>
</tr>
</tbody>
</table>

Table 17: Percentage change in water abstractions for Kosovo* as per the ‘Sustainability Eventually’ scenario under the SCENES project.

The (few) projections and quantifications included in the strategies and plans of the economies indicate that such a scenario will likely not be achieved; thus, leading to water use unsustainability in at least part of the region.

The Kosovo* Water Strategy 2017-2036 addresses water efficiency. The Energy Strategy of Kosovo* 2017-2026 aims at achieving effective management of existing energy resources and protection of the environment, and at stimulating rational utilisation of energy, promoting energy efficiency and the development of renewable energy resources; the latter is also included in the Program for Agriculture and Rural Development 2015. The promotion of organic farming is considered as one of the options in the Climate Change Strategy 2014-2024. However, its relevance has not been assessed in this study.

2.1.16. Consideration of nature-based solutions

Nature-based solutions are defined as “actions to protect, sustainably manage, and restore natural or modified ecosystems, that address societal challenges effectively and adaptively,
simultaneously providing human well-being and biodiversity benefits” and include different concepts such as planning approaches (Integrated Water Resources Management) and infrastructure (Green Infrastructure, Natural Water Retention Measures). As climate change, population growth, and increasing consumption of resources create new threats with implications across the Nexus, nature-based solutions provide flexibility that enables adaptive management that is necessary to cope with changing conditions, and is more likely to sustain benefits in the midst of uncertainty and increased variability.

Nature-based solutions are not reflected as a priority within the assessed strategies/plans, and are usually not even reflected.

<table>

</tr>
</tbody>
</table>

Table 18: Overview on the consideration of nature-based-solutions in recent regulation, strategies or plans in Kosovo*.

The following relevant details for Kosovo* is highlighted:

2.2. The role of international action

International agreements, decisions or actions can influence the way that Kosovo* address the Nexus. There are three main pathways:

- By ratification of international agreements or conventions and the implementation of corresponding action plans;
- Via the process of EU accession, and the subsequent changes in institutions, regulation, planning, financing and management; and

By means of projects or initiatives developed with the support or involvement of international bodies.

Regarding the first of the three elements, Kosovo* has not ratified a large number of Nexus-relevant agreements and conventions. In the frame of this study, the implementation details have not been assessed.
The impact of the EU accession process on integration of the Nexus is also relevant and reflected in chapter 2.1.13.

International initiatives have made significant contributions to addressing the Nexus in Kosovo*, and – in some cases - to promote decisions that foster synergies. The following table provides an overview on initiatives identified and shows that these initiatives address usually several of the Nexus sectors, and with a strong aspect of capacity building/institutional set-up. In several of the initiatives, resource efficiency, nature-based
solutions and climate change adaptation have been addressed. However, this Study does not aim for a full review of the previous studies, thus uncertainties are marked in Table 20.

</table>

Table 21: Transboundary river basins and aquifers in Kosovo*.xviii.

Based on UNECE Second Assessment of Transboundary Rivers, Lakes and Groundwaters it can be stated that both the quantity and quality of transboundary water resources in SEE are under significant stresses.

Agriculture, domestic use, industry and tourism are the main users influencing withdrawal rates of water resources. Inefficiencies in water use and losses due to ageing and sub-optimal infrastructure are significant, most prominently so in the agriculture sector where the majority of farmers apply unsustainable irrigation practices.

Agricultural activities also contribute significantly to the worsening of the quality of water resources through chemical pollution from the use of fertilisers and pesticides leading to loss of biodiversity and deterioration of ecosystems.

Another cause of pollution is insufficient or lacking wastewater treatment including illegal discharges from industry and erroneous use of septic tanks in rural areas. Mining activities are also having negative impacts on several basins in SEE. Additionally, illegal or uncontrolled waste disposal sites are contributing to the pollution of both surface and groundwaters.

Seasonal impacts on water use, generation of waste and wastewater originate from tourism, as well as illegal construction on the banks of water bodies for recreational purposes.

Hydropower is the main non-consumptive water user in most of the transboundary basins in the SEE. Cooling for energy production, agriculture, domestic use, industry and tourism are the main consumptive users influencing withdrawal rates of water resources. The construction and operation of hydropower plants on waterways in SEE both pose challenges, ecological and socio-economic, and create benefits e.g. job creation, flood regulation, water diversion, irrigation, drinking water supply and recreational purposes. The challenges are multifaceted and range from bio-physical impacts, such as hydrological and
morphological alteration, fragmentation of habitats, erosion linked to soil and land loss, changes in sediment transport capacity and deposition, impacts on water quality and landscapes; to social impacts related to resettlement, loss of cultural and historic sites, land-use changes and alterations of livelihoods of local communities. Furthermore, concerns about impacts of human health due to water storage in large reservoirs have also been expressed.

The least understood constituent of SEE water resources are aquifers. Knowledge has significantly improved in recent years for the Dinaric Karst region of the Balkan peninsula.

Climate change impacts on water resources in SEE can be observed already with altered water regimes and runoffs in the area. That is in line with IPCC projections of SEE being a region to be severely hit by climate change in the future. The area will be faced with decreasing summer rainfall, increasing frequency and severity of droughts, risk of floods and extreme weather events. This may lead to secondary impacts of deteriorating water availability and quality, damages to human health, negative impacts on industry, forest fires, soil degradation, desertification, loss of land and habitats. Climate change will thus exacerbate the tensions between competing water uses and between users at different parts of the basins within the region, further complicating cross-border cooperation.

Out of the above list of transboundary river basins or aquifers, those that are transboundary within the SEE2020 economies have been further assessed regarding their Nexus-related conflicts, trade-offs and actions to overcome them, taken at the transboundary water management level:
### Nexus Assessment in South East Europe –Kosovo*

<table>

</tr>
<tr>
<td>Sava, incl. Macva-Semberija (Bosnia and Herzegovina, Serbia), Lim (Montenegro, Serbia), Tara massif (Bosnia and Herzegovina, Serbia)</td>
<td>Hydropower generation, agriculture and industry are the main economic sectors, sharing the major part of the available water resources in the sub-basin. The construction of water regulation structures and weirs at its tributaries; drainage networks, and flood protection systems, in combination with water abstractions, have caused hydrological and morphological alterations, including disconnection of adjacent wetland/floodplains. Interruption of river and habitat continuity and loss of wetland areas in the lower-middle and lower Sava areas are among the impacts. Organic, nutrient and hazardous substances pollution are also important pressure factors. Regarding Macva-Semberija, local and moderate nitrogen and pesticides from agriculture are reported (Serbia, Bosnia and Herzegovina); no water quantity problems. Regarding the Lim aquifer, 12/ &lt;25% of the total abstraction is for agriculture. Regarding the Tara massif aquifer, moderate to strong environmental impacts are reported related to the Bajina Basta reversible hydropower plant system (Serbia).</td>
<td>Sava River Basin Management Plan. Sava River Basin Flood Risk Management Plan. The Geographical Information System, the River Information Services (for the improvement of navigation safety), and the Flood Forecasting and Early Warning System were prepared by 2012. 1. Development of the Hydrological Model for the Sava River Basin (SRB) in August 2015 as a product of the World Bank WPP, with external contribution. 2. Guidance note on adaptation to climate change for flooding, hydropower, navigation, agriculture, and economic evaluation in August 2015 (WB WPP) when is also accomplished the final report on Water and Climate Adaptation Plan for the SRB. 3. The project in 2017: “Outline of the Climate Adaptation Strategy and basin-wide priority measures for the SRB” supported by International Office for Water (IOWater). The main project deliverable was the report on Outline of the Climate Change Adaptation Strategy and priority measures for the SRB. The Accident Emergency Warning System is in place. Cooperation among the Parties to the FARSB through the ISRBC represents the most advanced effort of its kind in the South-Eastern Europe, Montenegro has already been approached by the ISRBC for integration. However, Montenegro is not a Party of the FASRB as it is not riparian economy. Cooperation between ISRBC and Montenegro has been based on MoU that was signed in Belgrade on December 9, 2013 xxiv. Regarding Macva-Semberija, groundwater abstraction regulation and quantity monitoring, protection zones, and</td>
<td>Sava river aspects have been addressed in the RBMP. No information on actions on aquifers.</td>
</tr>
</tbody>
</table>
For the Lim aquifer, abstraction management, protection zones and vulnerability mapping for land use planning need to be applied, together with monitoring of groundwater quantity and quality. For the Tara massif aquifer, groundwater abstraction management and quantity monitoring in use needs improvement. An integrated monitoring system is needed.

Table 22: Nexus-relevant challenges and corresponding transboundary actions in river basins and aquifers in Kosovo*. xxv.
3. Conclusions

Kosovo’s economic indicators show a steady positive trend since 2003, with slowly reducing patterns in terms of GDP, (GDP has doubled from 2003 to 2016), employment and (less) poverty. The economy is not self-sufficient in terms of energy and food production, and imports both; these imports will continue in future as energy consumption increases steadily and agricultural areas are under pressure from urbanisation and flooding. Furthermore, the area preserves a rich biodiversity, with increasing protected areas and numerous endangered species.

Kosovo is not yet recognized by the United Nations system, so it is not a signatory to international conventions such as the UN Framework Convention on Climate Change (UNFCCC). In 2015, Kosovo signed a Stabilization and Association Agreement with the European Union, and is working to align its legislation with EU legislation as part of the EU approximation process, including environment and disaster risk reduction.

Kosovo has insufficient water resources, and in the future, this will likely be a limiting factor for economic and social development of the country. It is estimated that Kosovo has only 1,600 m3/water/year per capita. Groundwater reserves are limited and are found mainly in the western part of Kosovo, where surface water resources are larger - compared to the eastern part, where water demands are very high, for urban supply, irrigation and industry.

Kosovo has difficulty in meeting peak demand for electricity. Energy predominantly comes from coal-fired power plants. Hydropower supplies 3–6 percent and its expansion is limited by the unequal distribution and inadequacy of water resources. The production of renewable energy sources and energy efficiency are both considered in the sector strategy.

53% of Kosovo is agricultural land. The sector provides food and income security for Kosovo’s rural population, although its share of GDP dropped from 25 percent to 14 percent in the last 25 years. The sector is mostly semi-subsistence and small-scale – 97 percent of holdings are under 5 hectares. Half of farms are active in livestock production, especially of dairy cows. Main agricultural products are corn, wheat, barley and milk. Sector growth is limited by inadequate irrigation, which covers only 17 percent of agricultural land. Fluctuations in rainfall leave regions without irrigation exposed to drought or flood conditions. The sector strategy aims primarily for the increase of the agricultural competitiveness and production.

Kosovo has an important biodiversity, which is yet to be fully discovered. There is loss of biodiversity of flora and fauna water: as a cause of pollution waters from urban pollution, agriculture and industry; Insufficient water quantity, especially during dry periods; Erosion;
Construction of hydro-powers for generation of electrical energy and gravel extraction from river beds.

Regarding the institutional set-up, there are leading Ministries for Water & Environment, Agriculture and Energy (Ministry of Economic Development), with several new structures and competencies. However, there is no inter-governmental coordination body set up; except for the Water sector, with the Inter-Ministerial Water Council (IMWC) allocated at the Prime Minister’s Office.

The Nexus sector regulation has been adopted a decade ago, and offers numerous references to the other sectors, thus enabling cooperation.

However, the recently adopted strategies and plans do only make limited use of integration of the Nexus; with the exception of the water sector, which provides resources for energy and agricultural development, and the agricultural plans aiming for the production of renewable energy.

Whilst resource efficiency is somehow addressed in strategies and plans (energy, water, renewable energy and organic farming), climate change resilience or nature-based solutions are not covered by strategies or plans from the different sectors, thus limiting the Nexus approach.

Significant further steps are needed in administrative coordination and the development of strategies and plans as well as related investments to ensure a synergistic approach towards the water-Energy-Food-Ecosystem Nexus.

13 Wikipedia
| **Climate resilience** | Nexus element (e.g. water) in return for gaining another quality, aspect or amount of another Nexus element (e.g. energy).  
| **Sustainable consumption patterns** | the capacity for a socio-ecological system to: (1) absorb stresses and maintain function in the face of external stresses imposed upon it by climate change and (2) adapt, reorganize, and evolve into more desirable configurations that improve the sustainability of the system, leaving it better prepared for future climate change impacts.  
| **Demand management** | Sustainable consumption relies on certain premises such as (1) Wise use of resources, and minimisation of waste and pollution; (2) Use of renewable resources within their capacity for renewal; (3) Fuller product life-cycles; and (4) Intergenerational and intragenerational equity.  
| **Synergies** | In natural resources management, demand management refers to policies to control consumer demand for environmentally sensitive or harmful goods such as water and energy.  
| **Governance** | The creation of a whole that is greater than the simple sum of its parts.  
| **Natural resource management** | The processes of interaction and decision-making among the actors involved in a collective problem that lead to the creation, reinforcement, or reproduction of social norms and institutions.  
| **Strategic document** | The management of natural resources such as land, water, soil, plants and animals, with a particular focus on how management affects the quality of life for both present and future generations (stewardship).  
| **Strategic document** | These include policy papers, strategies, action or investment plans, communications, key projects or similar initiatives.
