H2O (Help-2-Others) Wheel Starter Guidelines

What is an H2O Wheel?

1. Green Coloured Polyethylene Food Grade Container.
2. White Plastic Cap (small x 2). One side cap for use, the other on the back serving as a stepney.
3. White Plastic Lid with a Rubber Seal.
4. Ball Pin Lockable Handle.
5. Two openings for water filling and cleaning.
6. Two white knobs on the sides.

How to Use and Care for an H2O Wheel to Maximise its Lifespan?

Rolling Surface: The wall thickness of the H2O wheel will prevent sharp stones, glass and barbed wire from damaging the Wheel. However, do not allow the drum, while filled with water, to fall down or roll downhill into rocks and trees as this may cause a crack and render the wheel unusable.

Handle: The handle allows the wheel to be pushed or pulled over any terrain. The ends of the ball pin handle must be inserted and locked into the affixed white knobs for tight grip. DO NOT try to remove the white knobs.

Lids and Caps:

Large Opening: There are 2 openings for water filling and cleaning and 3 caps. It has a large opening on the front for easy cleaning. It allows the user to place their arm inside to clean the inside of the drum as needed. The large opening comes with a rubber seal to prevent leakage. If the seal is not fixed properly, it can lead to leakage.

Therefore, the large opening should be avoided for frequent water filling and should be used only if the wheel has to be cleaned, so that the seal remains intact. H2O Wheel should be washed externally and internally at least once a week. Any minor leaks will reduce the more the H2O Wheel is used.

Mini-Opening and Utility Cap: The mini opening facilitates hygienic dispensing of water without contaminating the contents of the wheel. In addition to daily household water requirements, it can be used for simple irrigation of food gardens. In case, one mini cap is lost or damaged, there is a stepony/utility cap on the front for replacement.

What are the benefits of an H2O Wheel?

- **MORE WATER, MORE TIME**
The H2O Wheels 40 Litre capacity carries 5x more water, freeing up more time and energy to focus on household tasks, schooling and farming needs.
- **BETTER HEALTH AND HYGIENE**
More water means a cleaner and more hygienic home.
- **ENVIRONMENTALLY FRIENDLY**
The wide rolling surface of the H2O wheel compacts the soil and protects pathways from the effects of erosion caused by wheelbarrows.
- **LOW MAINTENANCE**
Low to zero maintenance make the H2O Wheel simple to use.
- **IMPROVE PRODUCTIVITY**
Tasks at home are easier, making smarter use of your time.
- **SUSTAINABLE FARMING**
Easy Irrigation means better crops and increased income potential.
- **DURABILITY**
Designed for tough rural conditions, the H2O Wheel is designed to last.
