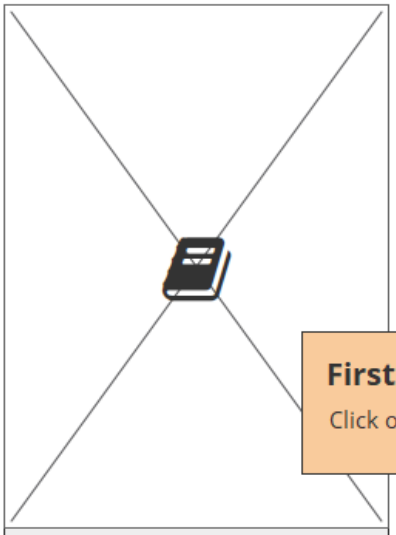
An Action Hub by: Global Water Partnership

ABOUT LEARN EXPLORE CONNECT

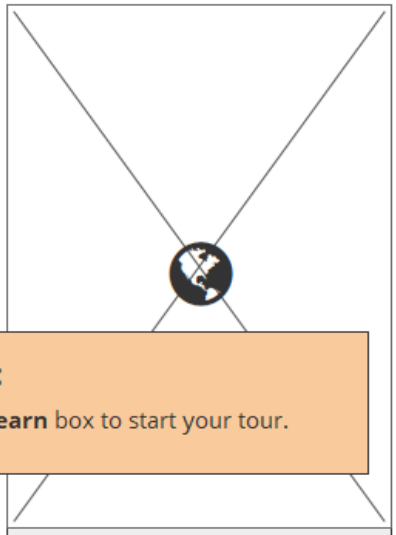
Welcome to the IWRM Action Hub prototype!

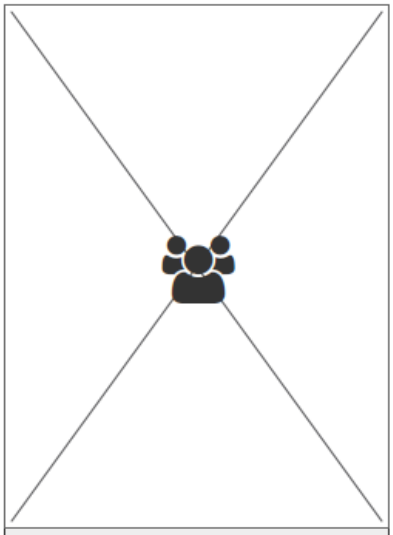
The boxes below indicate the different sections of the IWRM Action Hub. In this demo, we will go through the main sections (**Learn** and **Explore**). Follow the orange boxes for step-by-step guidance.



First step:

Click on the **Learn** box to start your tour.





Learn

Find resources to use as reference for your IWRM practices, submitted by practitioners and professionals from all over the world and reviewed by the GWP knowledge management team.

Explore

Discover what IWRM means in practice with country profiles and empirical case studies from all around the world. Test your knowledge on degree of IWRM implementation in your county of choice through the IWRM Survey.

Connect

Explore the network and communities of water governance professionals, innovators, practitioners and policy makers who are passionate about working towards a water secure world.

About

Learn more about the IWRM Action Hub and its offerings. Get access to help material and frequently asked questions.

User area

Become an member of the global IWRM network and get access to tailored offerings.

Caja de herramientas para la incorporación de la perspectiva de género en las operaciones relacionadas con el agua

Spanish

Recurso: - Referencias técnicas

Descripción

El objetivo de esta caja de herramientas es proporcionar a los equipos de trabajo orientación para mejorar la transversalización de género en el diseño, implementación y evaluación de proyectos. Se centra en los roles y responsabilidades de hombres y mujeres para garantizar que se aborden las preocupaciones y prioridades de ambos géneros.

Climate change adaptation policies

IWRM Tool - A1.03

English

Characteristics

Global warming and related climate changes will significantly influence the water environment in the coming decades. There is consensus that those changes will appear through the spatial distribution and timing of rainfall and might cause both more frequent and higher intensity floods and droughts. There is a firm consensus that it is predicted that a few degrees of change in te e extent that a while in other a are major and a prepared a

W th monthly and a , where the ra here the costs o inaction become higher. Thus, the situation where progressing climate c onal and d cy are found in I fs between d ustainability, e terms. An a during preparation of the appropriate responses, so as to provide water security for the productive and non-productive sectors over time. The spatial-temporal dimensions of climate change will entice very different changes on say hydropower versus ecosystem use.

A policy also has to guide the selection of appropriate responses and interventions, set priorities of these interventions and outline how these interventions may be implemented. The policy will seek adaptive and "no-regret" interventions due to uncertainties involved. The adaptive responses are interventions that can be changed/adjusted marginally and in step with climate changes and can closely follow the ongoing development of the situation. "No-regret" interventions are those measures that turn out to be of benefit no matter how or if the predicted climate change impacts materialize. For example, increasing the irrigation capacity in rural areas may, on the one side, increase your ability to cope with extreme events such as floods and droughts but, on the other side, also holds great general benefits in terms of agricultural development.

A policy also has to prioritize and strike a balance between "hard interventions" and "soft interventions". The soft interventions are those that deal with the development of institutions and human resources aiming to build capacity to address the climate change impacts. Flood warning systems and emergency preparedness are among the soft interventions. The "hard interventions" include infrastructural elements such as dams, flood walls and dikes. The financial situation of the nation will influence the choices and balances between "soft" and "hard" interventions. It is important that adaptation policy is not misinterpreted with conducting individual projects with the name of adaptation. If individual projects are not properly embedded within a broader adaptation policy, this might lead to white elephant projects.

IWRM Tools

Users will have the ability to view descriptions of tools that can help them perform specific IWRM activities. The tools will be hierarchically navigatable and will point users to relevant platform content. They will also be shareable, printable and downloadable.

Next step:

Click on the **Learn** option on the page breadcrumb to jump back to the Learn landing page.

Learning opportunities

The goal of this section is to catalog upcoming and past learning events about IWRM-related topics, encouraging users to find opportunities to enhance their skills on the field.

The main entry point is a calendar that summarizes the events of the current month, but allows users to navigate at any point in time and find relative events.

Next step:

Click on **April 27th** on the calendar to find registered events for that particular date.
